Housing Needs Reports – Summary Form32
PART 1: KEY INDICATORS AND INFORMATION 32
PART 2: KEY FINDINGS..... 34
Appendix A: Technical Report.....39

Land Acknowledgement

It is proper protocol to acknowledge that this report has been prepared for the Village of Burns Lake which is located in the traditional, ancestral and unceded territory of the Carrier Sekani people which includes the Wet'suwet'en First Nation, Lake Babine Nation, and Ts'il Kaz Koh (Burns Lake Band). They have been custodians of this land for thousands of years and we would like to pay our respect to their Elders and knowledge keepers both past and present.

1.0 Background and Context

1.1 Introduction

Local governments are required to prepare Housing Needs Reports. This report seeks to provide a better understanding of current and future housing needs in the Village of Burns Lake. The information set out in this report is intended to support local planning and decision making and provides baseline measures and indicators for tracking and reporting on existing and emerging housing needs in the community.

The key issues and challenges set out in this report as well as the opportunities for action were informed by feedback received through an on-line community survey which was completed in 2019 and which received 162 responses as well as feedback received through a series of key informant interviews with key community partners and stakeholders.

This report also relies on the collection and analysis of a number of key housing-related measures and indicators gathered from across a number of different sources including:

- The 2016 Census
- The 2011 Census and National Household Survey
- The 2006 Census
- BC Housing (Unit Count Report)
- BC Assessment data
- Local housing market information including MLS and other market-related data
- B.C. Stats including population and household projections available through P.E.O.P.L.E. 2020 at the regional district and local health area level

1.2 Community Context

The Village of Burns Lake is located in the Regional District of Bulkley-Nechako and is found within the traditional, ancestral and unceded territories of the Carrier Sekani people which includes the Wet'suwet'en First Nation, Lake Babine Nation, and Ts'il Kaz Koh (Burns Lake Band).

Based on the 2016 Census, the Village of Burns Lake is home to 1,779 individuals, or 695 households and is recognized as an important regional centre within the RDBN.

2.0 Housing Demand

2.1 Population Growth and Change

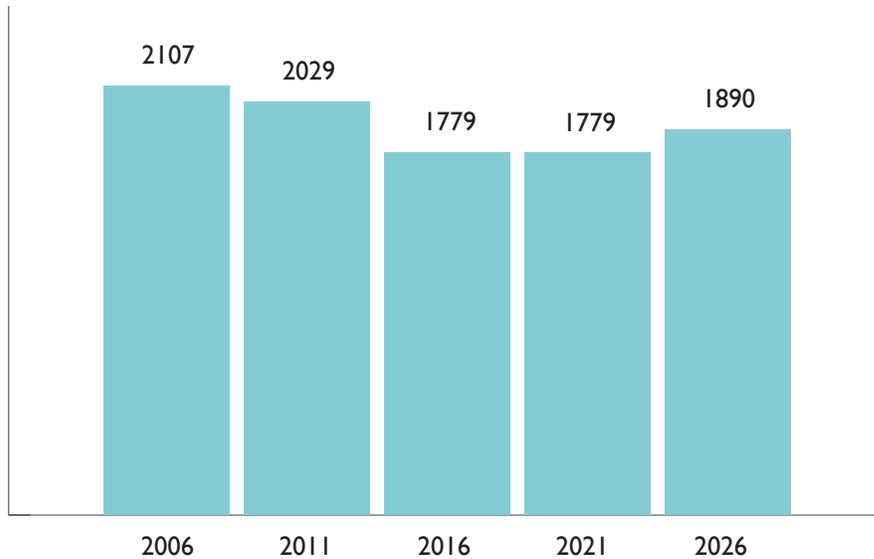

Like many other northern communities, the Village of Burns Lake is subject to significant shifts in population resulting from broader social and economic forces.

Based on population growth estimates prepared by B.C. Stats through P.E.O.P.L.E. 2020 for the *Burns Lake Local Health Area*, it is expected that the population in the Burns Lake Local Health Area will grow by 362 individuals between 2016 and 2026, representing a growth rate of 5.8%.

Assuming that the Village of Burns Lake experiences a similar pattern of growth to that expected within the broader region and local health area, it is likely that the Village of Burns Lake will grow by 111 individuals between 2016 and 2026, or 6.2%.

This expected rate of growth is equal to approximately 31% of the expected growth within the Burns Lake Local Health Area for the same time period. Furthermore, given the constraints on the current supply of housing and the changing needs of an aging population, it is important for the Village of Burns Lake to actively plan for this growth.

Graph 1: Population Growth and Change

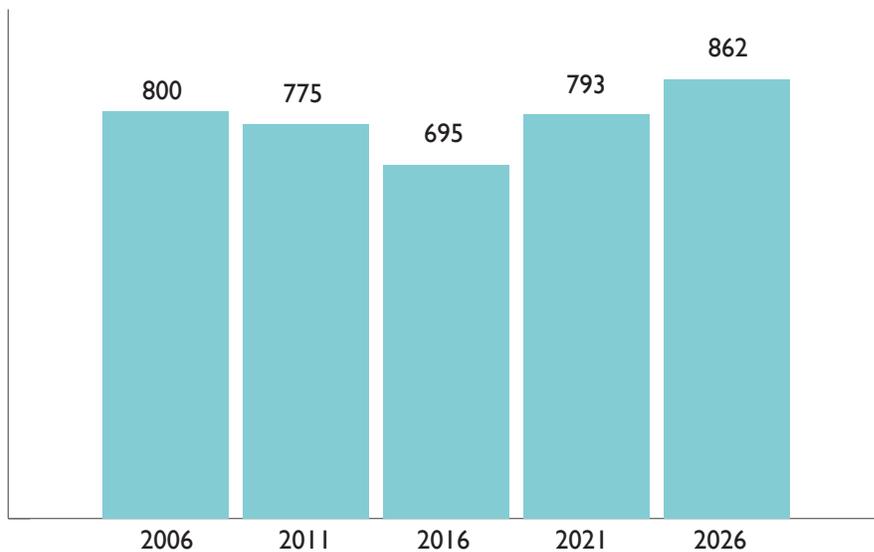

2.2 Household Growth and Change

At the time of the 2016 Census, there were 695 households living in the Village of Burns Lake. This represents a decrease of 105 households (13.1%) when compared to 2006. However, population and household growth projections prepared by B.C. Stats suggest that the RDBN is expected to experience significant growth as more households move to the region. This will create additional housing demand.

Assuming that the Village of Burns Lake experiences a similar pattern of growth to that expected in the RDBN, it is expected that between 2016 and 2021, the total number of households in the Village of Burns Lake will increase by 98 households. Similarly, between 2021 and 2026 the total number of households in the Village of Burns Lake will grow by an additional 69 households.

Graph 2: Housing Demand

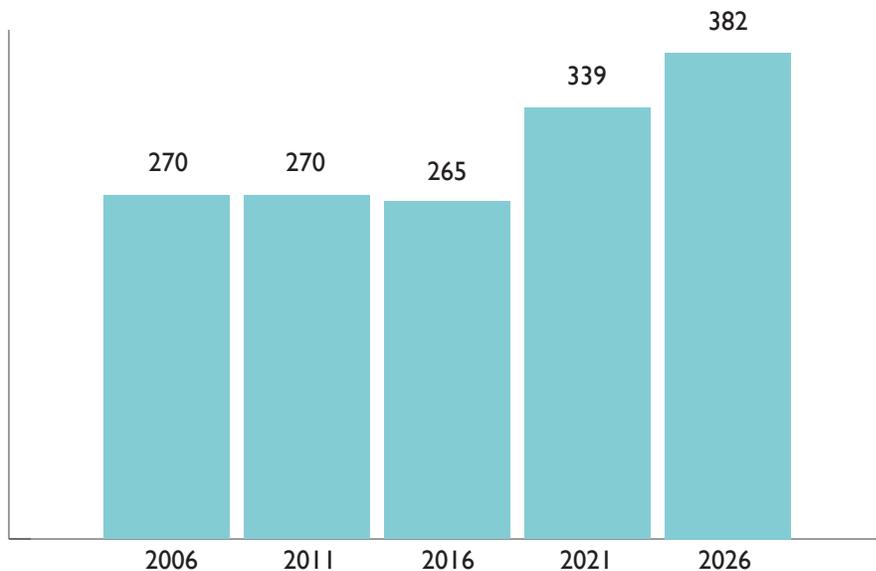

2.3 Housing Needs of Seniors

The Village of Burns Lake has a large and growing seniors population 65 and older as well as a growing number of older seniors 85 and older. At the time of the 2016 Census, there were 190 seniors in the Village of Burns Lake who were between the ages of 65 and 84. As well, there were an additional 75 seniors who were 85 and older.

Based on population projections prepared by B.C. Stats, it is estimated that the number of seniors 65 and older living in the Burns Lake Local Health Area will increase by 264 individuals or 27.9% between 2016 and 2021. Moreover, it is expected that between 2021 and 2026 there will be an additional 152 individuals who are living in the Burns Lake Local Health Area who are 65 and older, representing a growth rate of 12.6%.

Assuming a similar pattern of increase among seniors in the Village of Burns Lake, it is estimated that between 2016 and 2021, the number of seniors 65 and older will increase by 74 individuals (27.9%) with an additional increase of 43 individuals (12.7%) between 2021 and 2026.

Graph 3: Growth of Seniors Population

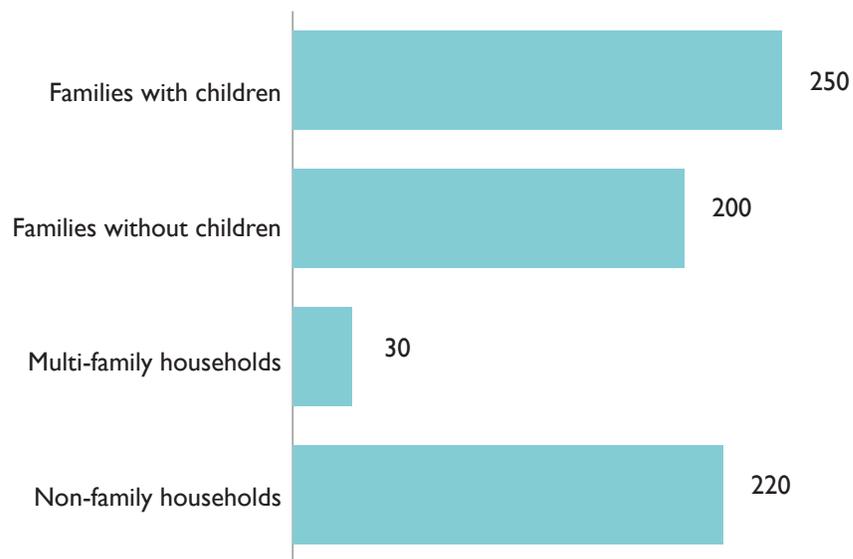

2.4 Housing Needs of Families

Family households represent 445 households or 64.0% of all households living in the Village of Burns Lake. This includes:

- 250 families with children (35.9%)
- 200 families without children (28.7%) including young couples who have not yet started a family, and senior couples who are now 'empty-nesters'

There are also 220 non-family households (31.6%) which includes single person households living on their own as well as unrelated individuals sharing. There are also 30 multi-family households living in the Village of Burns Lake, representing 4.3% of all households

Graph 4: Housing Needs of Families

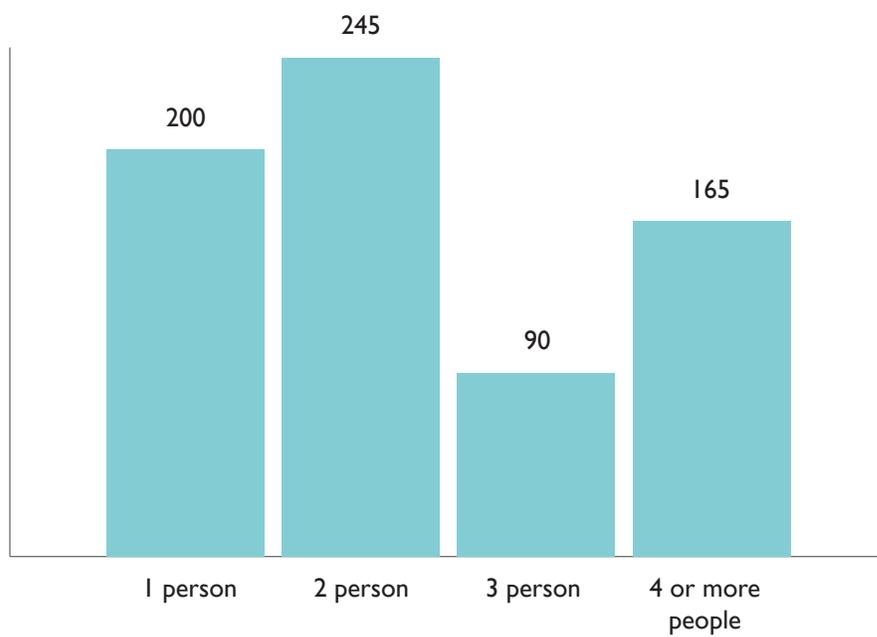

2.5 Household Size

In terms of the general profile of households living in the Village of Burns Lake, the 2016 Census reported that there were:

- 200 single person households, representing 28.8% of all households
- 245 2-person households, representing 35.3% of all households
- 90 3-person households, representing 12.9% of all households
- 165 households of 4 or more people, representing 23.7% of all households

Graph 5: Household Size

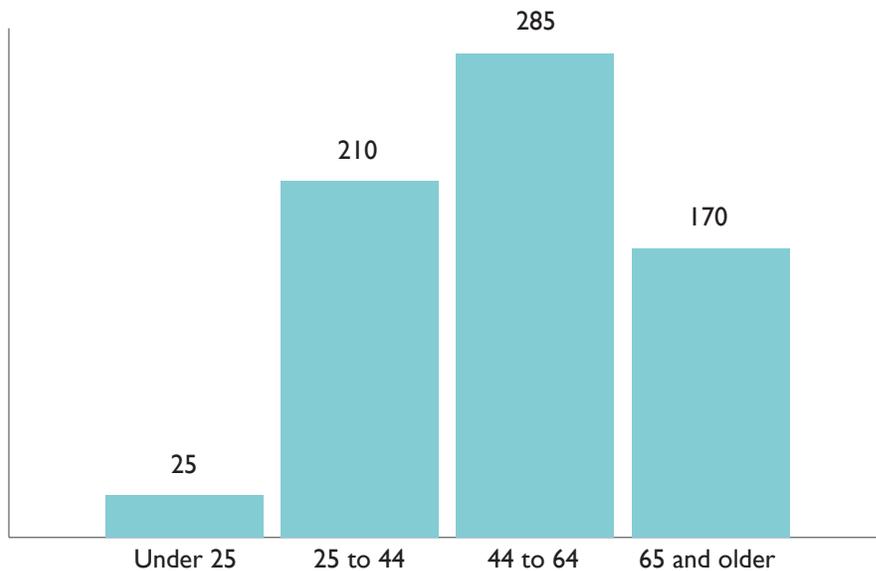

2.6 Age Profile of Household Maintainers

In looking at the age profile of households living in the Village of Burns Lake, the 2016 Census reported that there were:

- 25 households (3.6%) under the age of 25
- 210 households (30.4%) between the ages of 25 and 44
- 285 households (41.3%) between the age 45 to 64
- 170 households (24.6%) 65 years and older

While 1 in 4 households (24.6%) living in the Village of Burns Lake in 2016 was 65 or older, the available data also suggests that the Village of Burns Lake has been successful in attracting younger families and working professionals with the 2016 Census reporting that 25 households or 3.6% of all households living in the Village of Burns Lake were led by someone under the age of 25.

Graph 6: Age Profile of Household Maintainer

2.7 Households in Transition

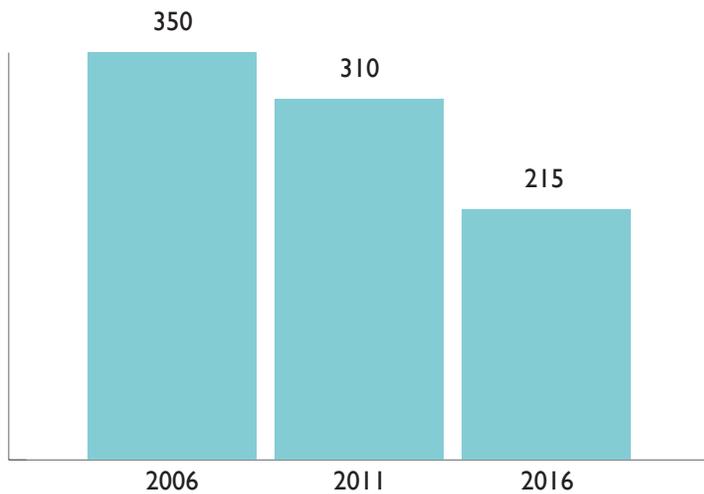

Population mobility data from the Census, shows that between 2006 and 2016, the Village of Burns Lake reported an average of 290 movers annually with an average of 128 individuals moving to the community from elsewhere within the RDBN.

People move for a variety of reasons including to be closer to employment and other economic opportunities. At the same time, changing family and household needs can also play a role in changing housing demand.

In looking at the future housing plans of individuals who responded to the on-line community survey conducted in 2019, 34% of all respondents indicated that they expected that their needs would change in the next 3 to 5 years. This included individuals who were renting and who indicated that they would like to purchase a home, as well as seniors who already own a home and who would like to downsize and move closer to available services and amenities.

In looking at the available data, the 2016 Census shows that approximately 48.8% of all movers in 2016 were owners while 51.2% were renters

Graph 7: Households in Transition

2.8 Housing Needs of People with Disabilities

People with disabilities have a diverse range of housing needs. Based on the 2016 Census, there were 280 individuals living in the Village of Burns Lake who reported a permanent health and activity limitation and an additional 450 individuals who reported episodic challenges.

Furthermore, as the population ages, the number of individuals reporting health and activity limitations will continue to increase. This will contribute to increasing demand for housing which is adaptable and accessible and that includes integrated housing and supports.

Information from the Canadian Disability Survey (2017) also shows that seniors 65 and older typically have a higher incidence of mobility-related disabilities as well as a higher incidence of flexibility and pain-related disabilities, resulting in increased demand for ground-oriented housing as well as an expanded range of housing and supports for seniors living in the community.

Table 1: Incidence of Canadians 15 and older reporting health and activity limitations.

	Total – aged 15 years and over	15 to 24 years	25 to 64 years	65 years and over
Pain-related	14.5	4.4	13.5	26.2
Flexibility	10.0	1.7	8.2	22.8
Mobility	9.6	1.6	7.3	24.1
Mental health-related	7.2	7.8	7.6	5.4

2.9 Housing for Individuals Experiencing Homelessness

Homelessness is a significant and growing issue across many communities in British Columbia. The Canadian Observatory on Homelessness has developed a definition of homelessness that takes into consideration the different dimensions of homelessness and that includes the following:

Homelessness describes the situation of an individual, family, or community that is living without stable, permanent, or appropriate housing, or the immediate prospect, means and ability of acquiring it.

Homelessness is the result of systemic or societal barriers, a lack of affordable and appropriate housing, the financial circumstances of individuals and households and can be the result of mental, cognitive, behavioural or physical challenges. It can also result from a history of racism and discrimination.

In looking at the housing and research literature, the findings suggest that most people do not choose to be homeless, but it may be the best possible choice of those that are available. Most would also agree that the experience of homelessness is generally negative, unpleasant, unhealthy, unsafe, stressful, and distressing.

Information contained in the housing and research literature also suggests that people who are homeless in rural areas rarely fit the standard definition of homelessness. While some are literally homeless, the majority are living in extremely precarious housing situations or find themselves moving from one overcrowded or barely affordable housing situation to another. Many will also have to rely on family or friends or live in poorer quality housing because that is all they can afford.

The history of colonialism within Canada and the impact of racial and cultural discrimination is also an issue that has contributed to increasing levels of homelessness among Indigenous people, with many Indigenous people continuing to face attitudes of racism and discrimination which negatively affects their access to housing, employment, and other opportunities.

In response to the specific experiences and circumstances of Indigenous people in Canada, the Canadian Aboriginal Standing Committee on Housing and Homelessness has developed a specific definition of homelessness for Indigenous Canadians. It includes:

Homelessness is a human condition that describes First Nations, Metis, and Inuit individuals, families or communities lacking stable, permanent, appropriate housing, or the immediate prospect, means or ability to acquire such housing. Unlike the common colonialist definition of homelessness, Indigenous homelessness is not defined as lacking a structure of habitation; rather, it is more fully described and understood through a composite lens of Indigenous worldviews.

In looking at Indigenous homelessness it is recognized that individuals, families and communities are isolated from their relationships to land, water, place, family, kin, each other, animals, cultures, languages and identities and that Indigenous people experiencing these kinds of homelessness cannot culturally, emotionally or physically reconnect with their indigeneity or lost relationships.

The Canadian Aboriginal Standing Committee on Housing and Homelessness also noted that when looking at Indigenous homelessness, the definition encompasses twelve specific components including:

- historic displacement homelessness—displacement from pre-colonial Indigenous lands
- contemporary geographic separation homelessness—separation from Indigenous lands after colonial control
- spiritual disconnection homelessness—separation from Indigenous worldviews
- mental disruption and imbalance homelessness—mental imbalance caused by the marginalization created by colonialism which leads to homelessness
- cultural disintegration and loss homelessness—homelessness that alienates people from their culture
- overcrowding homelessness—unsafe, unhealthy and overcrowded living spaces causing homelessness
- relocation and mobility homelessness—being homeless while traveling between places
- going home homelessness—returning ‘home’ from another community and being seen as an outsider, and unable to find accommodation
- nowhere to go homelessness—complete lack of shelter, housing or accommodation
- escaping or evading harm homelessness—fleeing for safety
- emergency crisis homelessness—combined causes leading to loss of home
- climatic refugee homelessness—altered lifestyle, subsistence and connection to land, due to climate change

Through the consultation process, it was also noted that the Village of Burns Lake experienced a sharp increase in the level of visible homelessness arising the impact of COVID-19 and other factors.

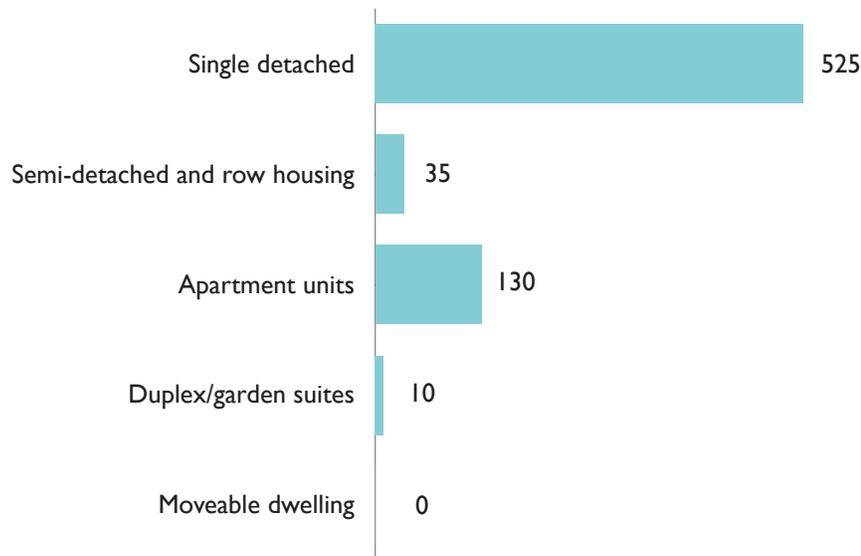

3.0 Housing Supply

3.1 Mix of Housing Types

While the Village of Burns Lake has adopted policies to encourage and support greater diversity of housing types, at the time of the 2016 Census the majority of households living in the Village of Burns Lake were living in single detached homes. This includes 525 households (415 owners and 105 renters) and represents 75.5% of the housing stock. There were also 130 households living in apartments which represents 18.7% of the housing stock in the Village of Burns Lake. As well, there were 45 households (6.4%) living in a mix of semi-detached, row house and duplex units.

Through the community engagement process, it was clear that the community is open to looking at ways to increase the supply and diversity of the existing housing stock including increasing the mix of housing and unit types. This could include the addition of more duplexes, fourplexes, and sixplex units integrated into existing neighbourhoods. As well, it could include consideration of different types of mixed tenure, or mixed income housing models.

Graph 8: Mix of Housing Types

3.2 Housing Size/Number of Bedrooms

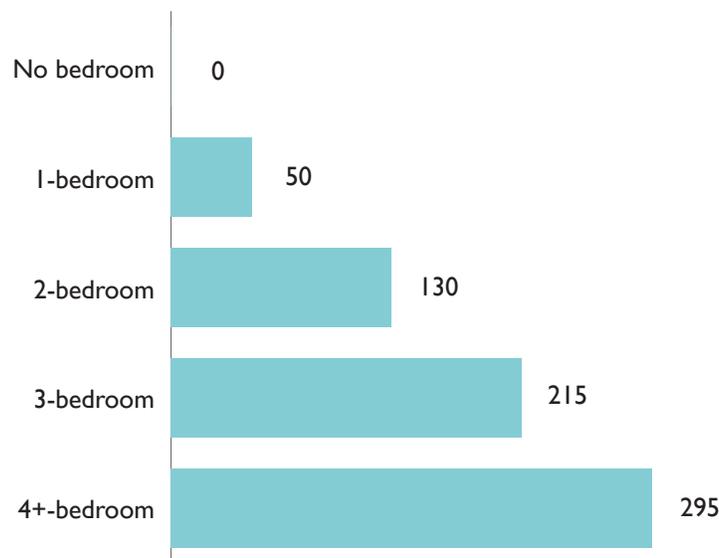

A large proportion of the housing stock in the Village of Burns Lake can be found in larger single detached family homes which were typically built to include 3 and 4-bedroom units. Based on the 2016 Census larger 3 and 4-bedroom units account for 74.0% of the total housing stock in the Village of Burns Lake with the following providing an overview of the mix of units:

- 0 studio units, 0% of the stock
- 50 1-bedroom units, 7.2% of the stock
- 130 2-bedroom units, 18.8% of the stock
- 215 3-bedroom units, 31.2% of the stock
- 295 4-bedroom units, 42.8% of the stock

Feedback received through the community consultation process demonstrates the need for additional 1-bedroom and 2-bedroom units to better meet the needs of an aging population, as well as the needs of younger working professionals moving to the community.

There are a variety of strategies the Village of Burns Lake may wish to consider including smaller home sizes (all on one level), smaller lot sizes as well as a mix of unit types including accessory suites, basement and garden suites as well as 'lock-off' suites. In looking towards the future, consideration could also be given to different types of mixed tenure and mixed income models

Graph 9: Number of Units by Bedroom Size

3.3 The Quality and Condition of the Existing Housing Stock

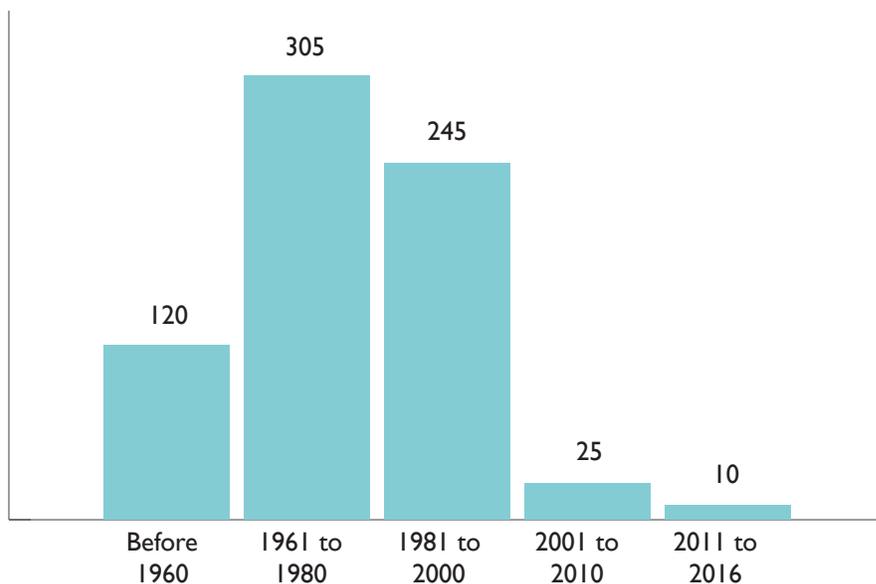

The 2016 Census shows that a significant proportion of the housing stock in the Village of Burns Lake was built before 1980 and may be reaching the end of its economic life. Through the key informant interviews, a number of participants spoke of the challenges associated with the age of the existing stock both in terms of the quality and condition as well as the overall economic viability and financial feasibility of making repairs.

At the time of the 2016 Census, there were 425 units which were built before 1980 which represents 61.2% of the total housing stock. As this stock ages, there will be the need for investments in replacement housing as well as targeted strategies to seek to improve the quality and condition of the existing housing stock including measures designed to improve the overall safety and energy efficiency of the stock.

In terms of the existing inventory of the older housing stock (built prior to 1980), the majority is ownership stock (261 units) which represents approximately 62.1% of the inventory of ownership stock. It is also worth noting that a large proportion of the rental housing stock in the Village of Burns Lake was built prior to 1980. Based on the 2016 Census, this would include 164 units, or 60% of the total rental housing stock.

Similarly, there were only 8 new homes registered on the new Homes Registry which is maintained by BC Housing

Graph 10: Age of the Existing Housing Stock

3.4 Housing Tenure and Choice

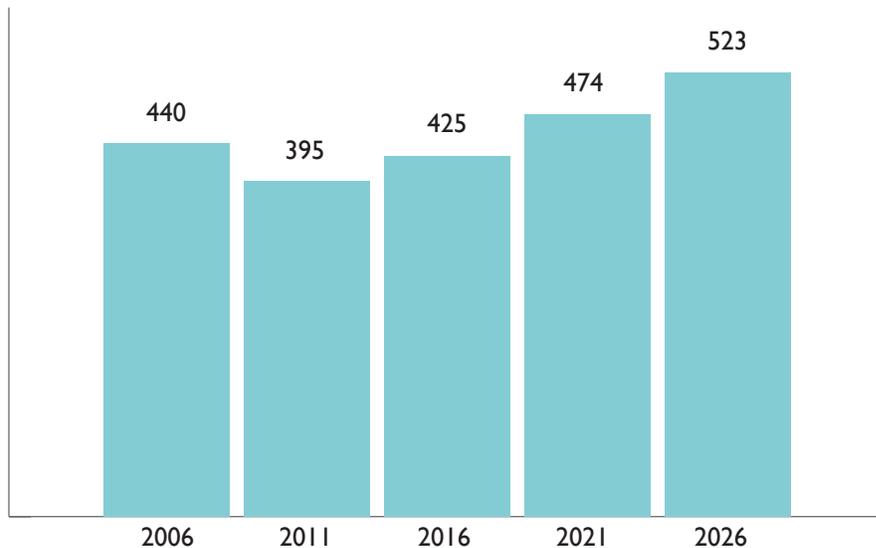

While the Village of Burns Lake has a large proportion of renter households when compared to other communities, it has also been successful in creating a mix of housing choices for owners.

Based on the 2016 Census, there were 420 owners, accounting for 60.4% of all households in the community and 275 renter households accounting for 39.6%. In looking at expected future housing demand and assuming that the tenure profile is consistent with the current rate of ownership in the Village of Burns Lake, it is likely that there will be the need for an additional 100 units of ownership housing and 67 units of rental housing to be built between 2016 and 2026.

As well, it is worth noting that the rate of home ownership in the Village of Burns Lake has continued to increase from 55% of all households in 2006 to 61.2% of all households in 2016. However, even with this increase in the overall rate of home ownership, the findings suggest that the overall rate of ownership within the Village of Burns Lake continues to lag behind the rate of ownership in the RDBN (76.7%) and the Province (68.0%).

In addition to the need for ownership housing, participants in the key informant interviews observed that there is a significant level of pent-up demand and shortage of supply in the inventory of rental housing within the Village of Burns Lake.

Graph 11: Total Owners

3.5 Low Income Demand

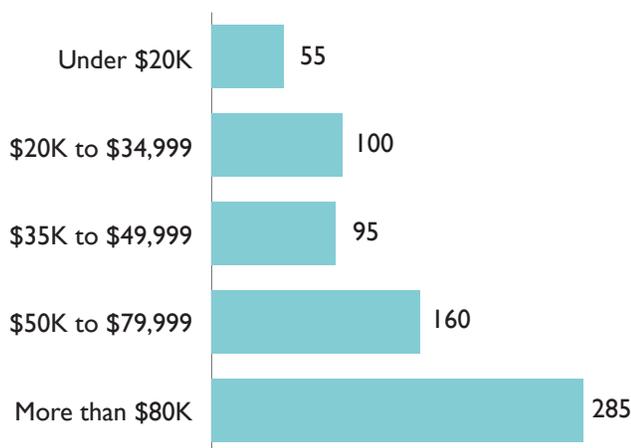

While the cost of housing in the Village of Burns Lake is reasonably affordable to most households, there are some households at the lower end of the housing and income continuum who will be experiencing some level of housing stress. Based on the income profile of households living in the Village of Burns Lake in 2016, there were:

- 55 households (7.9%) with an annual income of under \$20,000 and for whom an affordable housing cost would be \$500 per month
- 100 households (14.4%) with an annual income of between \$20,000 and \$34,999 and for whom an affordable housing cost would be between \$500 and \$875 per month.
- 95 households (13.7%) with an annual income of between \$35,000 and \$49,999 and for whom an affordable housing cost would be between \$875 and \$1,250 per month.
- 160 households (23%) with an annual income of between \$50,000 and \$79,999 and for whom an affordable housing cost would be between \$1,250 and \$2,000 per month.
- 285 households (41%) with an annual income of more than \$80,000 and for whom an affordable housing cost would be more than \$2,000 per month.

Of the 155 households with an annual income of \$35,000 or less, 95 households (61.2%) were renters. This represents 34.5% of all renter households. Typically, these needs would be met through the inventory of social housing or non-market housing created through a mix of Federal, Federal/Provincial and Provincial housing supply programs.

Based on the 2019 Unit Count Report published by B.C. Housing, there are 40 units of low-income family housing and 42 units of supportive seniors housing in the Village of Burns Lake. As well, the community has been successful in creating a number of targeted strategies including special needs and group home units, emergency shelter spaces and transitional and supportive housing for people who are experiencing homelessness including women and children fleeing violence. It also includes targeted rent assistance for low income families and seniors living in housing in the private market. Information on the inventory of non-market housing choices is described more fully in the next section.

Graph 12: Income Distribution of All Households

3.6 The Inventory of Non-Market Housing Choices

This section includes information on the inventory of subsidized housing available to families and individuals in different economic circumstances and lifecycle stages including:

Emergency shelter spaces: Emergency shelter spaces include housing with varying levels of support for individuals who are homeless or in crisis. Based on the 2020 Unit Count Report published by BC Housing (March 2020) there were no emergency shelter units in the Village of Burns Lake.

Homeless rent supplements: Homeless rent supplements include targeted housing assistance for individuals who are homeless. Access to this assistance provides support for individuals who are homeless to access housing in the private market. Based on the 2020 Unit Count Report published by BC Housing (March 2020) there were no individuals living in the Village of Burns Lake who were receiving homeless rent supplements.

Transitional and supported housing for individuals who are homeless: Transitional and supportive housing for individuals who are homeless provides housing and supports for individuals who are in crisis and who have a history of homelessness. Based on the 2020 Unit Count Report published by BC Housing (March 2020) there were 21 individuals living in the Village of Burns Lake who were housed through this form of housing.

Independent social housing: Independent social housing includes family and seniors' housing funded under a mix of Federal, Federal/Provincial and Provincial housing supply programs. In the Village of Burns Lake, there are 40 units of family housing built under previous government-funded housing supply programs while region-wide there were 150 units including 114 units for families and 36 units for seniors.

Rent assistance for households living in the private market: Rent assistance for households living in the private market involves the provision of financial assistance for eligible households to help cover the gap between the cost of their housing and the amount of rent that they can afford to pay based on the resources that they have available. Based on the 2020 Unit Count Report published by BC Housing (March 2020) there were 10 households in the Village of Burns Lake receiving assistance under the Province's SAFER and RAP programs.

Assisted living for seniors: Assisted living for seniors includes housing that is available for seniors who require some level of support in order to maintain their independence. BC Housing reported 14 units of assisted housing for seniors in the Village of Burns Lake.

Group homes and special needs housing: Group homes and special needs housing include different types of housing and shared living arrangements for persons with disabilities including housing for individuals with cognitive or developmental disabilities. BC Housing reported 6 units of this type of housing in the Village of Burns Lake.

Transitional housing for women and children fleeing violence: Transitional housing for women and children fleeing violence is housing which includes supports for women and children who need temporary accommodation and support. BC Housing reported 6 units of this type of housing in the Village of Burns Lake as well as a total of 41 units region-wide.

INDIVIDUALS EXPERIENCING HOMELESSNESS	SUPPORTIVE/ ASSISTED & SPECIAL NEEDS HOUSING	INDEPENDENT SOCIAL HOUSING	PRIVATE MARKET RENTAL ASSISTANCE	OWNERSHIP CHOICES INCLUDING ENTRY-LEVEL OWNERSHIP

Source: BC Housing Unit Count Report 2019

4.0 Housing Costs and Affordability

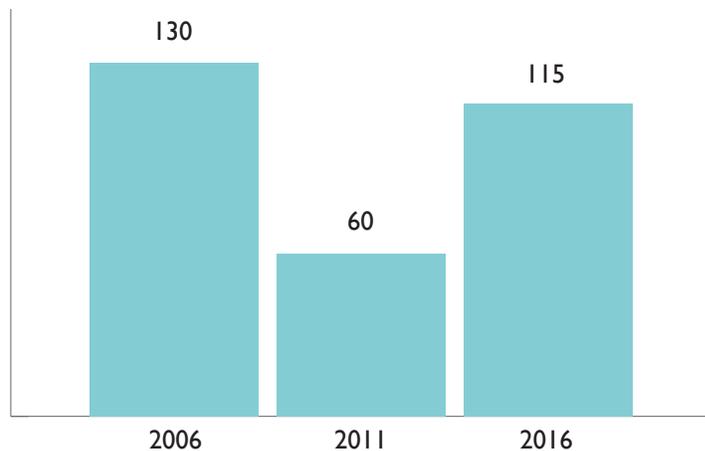

4.1 Housing for Low Income Households

Housing affordability can be viewed as both an income problem and a supply problem. It is an income problem in the sense that the high cost of housing can disproportionately affect households at the lower end of the housing and income continuum. This can include households who are in low paying jobs as well as those who are living with limited incomes and who do not have the resources needed to find suitable and appropriate housing in the private market.

Housing affordability can also be viewed as a supply problem in the sense that there is a shortage of suitable units available to households at the lower end of the housing and income continuum resulting in the need for many lower income households to make compromises or trade-offs in the quality or condition of their housing. This could include households living in housing that is inadequate or in poor condition because that is all that they can afford.

At the time of the 2016 Census, there were 120 households in the Village of Burns Lake who were living in housing that did not meet basic adequacy standards, representing 17.2% of all households. This includes 70 owners and 50 renters and represents 16.7% of all owners and 18.2% of all renters living in the Village of Burns Lake.

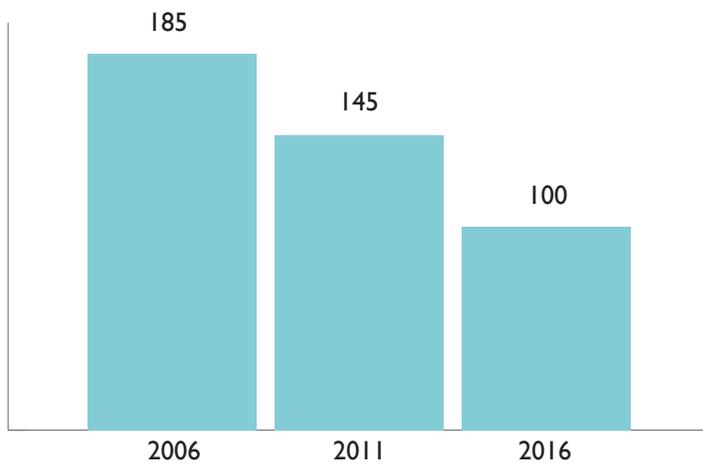

Graph 13: Households Living in Housing Falling Below Adequacy Standards

4.2 Households Falling Below Affordability

At the time of the 2016 Census, there were 100 households in the Village of Burns Lake who were living in housing that did not meet basic affordability standards. These are households (renters and owners) who were spending 30% or more of their income on their housing cost. At the time of the 2016 Census, there were 95 households in the Village of Burns Lake who were living in housing that did not meet basic affordability standards, representing 13.6% of all households. This includes 35 owners and 65 renters and represents 7.1% of all owners and 23.6% of all renters living in the Village of Burns Lake.

Graph 14: Households Falling Below Affordability Standards

4.3 Monthly Housing Costs (Renters)

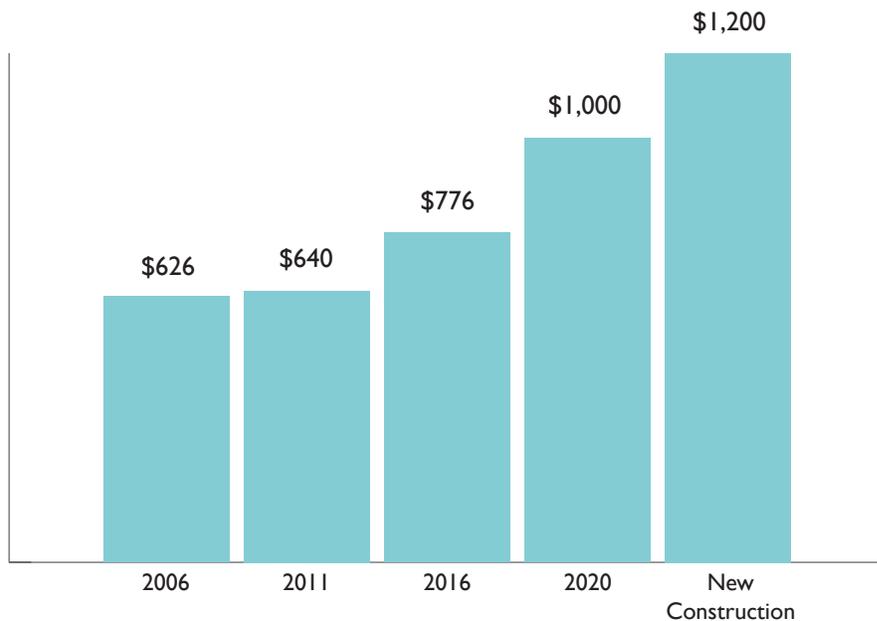

At the time of the 2016 Census, the average monthly rent in the Village of Burns Lake was \$776 per month. However, the key informant interviews conducted as part of this research suggest that the cost of housing in the Village of Burns Lake is considerably higher than the amount reported in the 2016 Census with typical rents being at least \$1,000 per month or more.

To successfully carry the cost of this housing, it is estimated that a household would need an annual income of between \$32,000 and \$40,000. However, most would say that affordability is not the primary housing issue in the Village of Burns Lake – it is the availability of housing that is the most challenging along with the quality and nature of the housing that is available.

Similarly, the community faces the challenge that the cost of new rental housing is not economically viable in that economic rent, or cost to build is above the amount that many renter households could afford to pay, with the economic rent for new rental housing being closer to \$1,200 per month. To carry the cost of this housing a household would need an annual income closer to \$50,000.

There are similar constraints that apply to the renovation or retrofitting of the older existing rental housing stock with the investments needed to make improvements to the stock making this housing less affordable. It could also potentially result in the displacement or economic eviction of the renter households currently living in this housing.

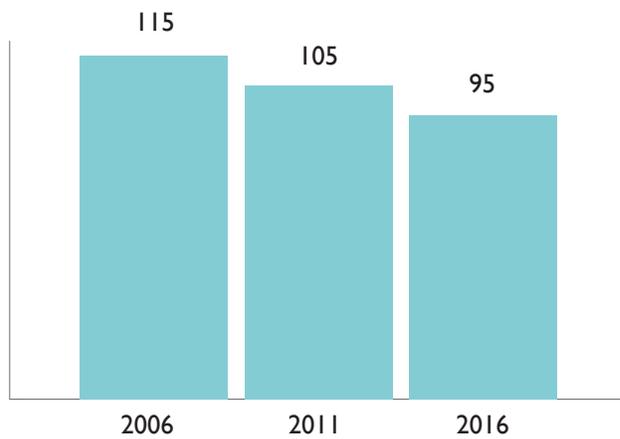

Graph 15: Average Monthly Housing Costs (Renters)

4.4 Households in Core Housing Need

Core housing need is a measure of housing need that was developed by CMHC (Canada Mortgage and Housing Corporation) to identify the number of households who are unable to find housing in their community that is suitable in size based on the needs of their family (i.e. not living in housing that is over-crowded) and that is in good repair (adequate) without spending 30% or more of their income on their housing costs. At the time of the 2016 Census, there were 95 households in the Village of Burns Lake who were in core housing need, representing 13.7% of all households. This includes 25 owners and 70 renters, representing 6.0% of all owners and 25.5% of all renters in the Village of Burns Lake.

Graph 16: Households in Core Housing Need

4.5 Households in Extreme Housing Need

Of the households in core housing need, the 2016 Census shows that there are 35 households in extreme housing need. These are households who are spending 50% or more of their income on their housing costs and who are at increased risk of homelessness with a decrease in their income or an increase in their rent having the potential to push these households into homelessness. At the time of the 2016 Census, there were 35 households in the Village of Burns Lake who were in extreme housing need. This includes 15 renter households and 20 owners.

Graph 17: Households In Extreme Housing Need

5.0 Opportunities for Action

5.1 Opportunities for Action

This section sets out some possible opportunities for the Village of Burns Lake to consider in working to continue to meet existing and emerging housing needs. In looking at the range of issues that were identified within the context of the development of this report, the following highlights some of the priority needs and areas for consideration. They include:

1. Increase the supply of housing for families
2. Increase the supply of housing for seniors
3. Consider increasing the diversity and mix of housing types
4. Address the growing homelessness crisis
5. Explore strategies to address the critical shortage of rental housing in the community.

5.2 Increase the supply of housing for families

Through the key informant interviews and the on-line survey, the need for more family housing (ownership and rental) was identified. This would include an expanded mix of entry-level ownership opportunities for families and households moving to the community for employment. In particular, a number of key informants highlighted the concern that many key workers moving to the community are looking for ownership opportunities in the long term but that it is almost impossible for these households to find rental housing in the short term as they make the transition. It was also noted that it is hard to attract people to the community if the community is unable to offer the right type of housing.

5.3 Increase the housing choices for seniors

The Village of Burns Lake is home to a large and growing seniors population. At the time of the 2016 Census, 170 households living in the Village of Burns Lake were led by someone 65 or older. To allow seniors living in the Village of Burns Lake (and the surrounding area) to age in place and remain in their community, there is the need for an expanded mix of seniors' housing choices including a mix of smaller units (1-bedroom and 2-bedroom units). This housing should be ground-oriented as well as adaptable, accessible and visitable, and should reflect the principles of universal design. Any housing that is developed should also be well integrated into existing neighbourhoods and located near services and amenities which allow seniors to successfully age in place. Through the key informant interviews, the observation was made that there is also the need for more supportive seniors' housing and assisted living spaces in the community.

5.4 Increase the diversity and mix of housing types

A significant proportion of the housing stock in the Village of Burns Lake is in the form of larger single detached homes. Through the community consultation process, there was an interest expressed in exploring different housing types and models including consideration of coach houses, row houses, 4-plex and 6-plex units. There was also community support for experimentation with 95% of those participating in the on-line community survey indicating that they would be supportive of increased experimentation with different housing types and

models provided it would benefit the community. In looking at ways to increase the supply and diversity of the existing housing stock, consideration should also be given different types of mixed income and mixed tenure models as a way of adding to the existing inventory of ownership and rental housing choices

5.5 Continue to address the growing homelessness crisis

The Village of Burns Lake has experienced an increase in the level of homelessness in the community with the impact of COVID-19 making the situation worse and more visible. While the community has been working closely with the Province to put temporary measures into place, longer term strategies and solutions are needed. This could include increasing the supply of studio and one-bedroom units in the community as well as working closely with local housing and service providers to ensure that appropriate wrap-around services and supports are in place. Consideration should also be given to working closely with Indigenous partners to support the development of culturally appropriate housing for Indigenous families and individuals experiencing homelessness. As well as a community the Village of Burns Lake has been successful in working to put into place multi-agency partnerships including partnerships with other levels of government (Federal, Provincial and First Nations).

5.6 Explore strategies to address the critical shortage of rental housing

Through the key informant interviews, concerns were raised about the quality and nature of the existing rental housing stock and the challenges that this has created. Based on the analysis of the existing inventory of housing in the Village of Burns Lake, the findings suggest that 60% of the rental housing stock was built before 1980. Furthermore, while there may be some potential investors in the community who might consider investing in making improvements in this housing, the current regulatory and market context does not make these types of investments economically viable. At the same time, there may be potential partnerships or other opportunities that could be considered with the right types of incentives. However, in looking at the different alternatives, investment decisions related to rehabilitation of the existing stock should be evaluated against investments in new supply.

6.0 Summary Report

Housing Needs Reports – Summary Form

MUNICIPALITY/ELECTORAL AREA/LOCAL TRUST AREA: Village of Burns Lake

REGIONAL DISTRICT: Regional District of Bulkley-Nechako

DATE OF REPORT COMPLETION: December 2020

PART 1: KEY INDICATORS AND INFORMATION

LOCATION	Neighbouring Municipalities and Electoral Areas: The Village of Burns Lake is located on the Highway 16 corridor which is the main transportation route to the communities in the area. Within the Regional District of Bulkley-Nechako, the closest municipality is the District of Houston and to the east the Village of Fraser Lake. There are also many small unincorporated communities which fall within Electoral Area E and Electoral Area B and which form part of the Lakes District.			
	Neighboring First Nations: The Village of Burns Lake is located in the Regional District of Bulkley-Nechako and is found within the traditional, ancestral and unceded territories of the Carrier Sekani people which includes the Wet'suwet'en First Nation, Lake Babine Nation, and Ts'il Kaz Koh (Burns Lake Band)			
POPULATION	Population: 1,779		Change since 2006: minus 15.6%	
	Projected population in 5 years: 1,890		Projected change: 6.2%	
	Number of households: 695		Change since 2006: minus 13.1%	
	Projected number of households in 5 years: 779		Projected change: 12.0%	
	Average household size: 2.5			
	Projected average household size in 5 years: 2.4			
	Median age (local): 39.8	Median age (RD): 41	Median age (BC): 42.5	
	Projected median age in 5 years: 40.1			
	Seniors 65+ (local): 14.9 %	Seniors 65+ (RD): 15.0 %	Seniors 65+ (BC): 18.2 %	
	Projected seniors 65+ in 5 years: 339 (27.9%)			
	Owner households: 420 (60.4%)		Renter households: 275 (39.6%)	
	Renter households in subsidized housing: 40 units family housing/42 units seniors' housing			
INCOME	Median household income	Local	Regional District	BC
	All households	\$68,284	\$ 76,549	\$ 69,979
	Renter households	\$59,953	\$ 47,424	\$ 45,848
	Owner households	\$79,538	\$ 85,786	\$ 84,333

ECONOMY	Participation rate: 64.4%	Unemployment rate: 13.6 %
	Major local industries: Forestry continues to be the primary economic driver for the community. Council has made it a priority to diversify the local economy and have made steps to increase the importance of tourism and small business as economic drivers.	

HOUSING	Median assessed housing values: \$198,700	Median housing sale price: \$229,000
	Median monthly rent: \$776	Rental vacancy rate: N/A
	Housing units—total: \$695	Housing units—subsidized housing: 82
	Annual registered new homes: 8 units in 2017	Annual registered new homes—rental: None
	Households below affordability standards (spending 30%+ of income on shelter): 14.4%	
	Households below adequacy standards (in dwellings requiring major repairs): 14.4%	
	Households below suitability standards (in overcrowded dwellings): 2.9%	

Briefly summarize the following:

1. Housing policies in local official community plans and regional growth strategies (if applicable):

The Village of Burns Lake updated their Official Community Plan in April 2017 under Bylaw No. 970, 2017.

2. Any community consultation undertaken during development of the housing needs report:

The community consultation process included citizen engagement through an on-line survey which was completed by 162 individuals. There were also a series of key informant interviews completed with community partners and service providers as well as representatives from the real estate services sector, the development community and the housing finance sector.

3. Any consultation undertaken with persons, organizations and authorities (e.g. local governments, health authorities, and the provincial and federal governments and their agencies):

Interviews were completed with administrative staff from the Village of Burns Lake, the RDBN, as well as representatives from the Northern Health Authority. Housing development consultants working with BC Housing on the delivery of current Federal/Provincial supply programs were also engaged.

4. Any consultation undertaken with First Nations:

There was some initial outreach and engagement with First Nation communities including the Burns Lake Band and Lake Babine Nation. Additional engagement with key First Nations partners is anticipated.

PART 2: KEY FINDINGS

Table 1: Estimated number of units needed, by type (# of bedrooms)

	Currently		Anticipated (5 years)	
	#	%	#	%
0 bedrooms (bachelor)	--	0%	20	23.5%
1-bedroom	50	7.2%	30	35.3%
2-bedroom	130	18.8%	25	29.4%
3+ bedroom	520	74.3%	10	11.8%
Total	695	100%	85	100.0%

Comments:

In terms of the general profile of households living in the Village of Burns Lake, the 2016 Census reported that there were:

- 200 single person households (28.8%)
- 245 2-person households (35.3%)
- 93 3-person households (12.9%)
- 100 4-person households (14.4%)
- 65 5-person households (9.4%)

Based on the housing demand projections, it is anticipated that the Village of Burns Lake will grow by 98 households (14.0%) between 2016 and 2021 and an additional 69 households (8.7%) between 2021 and 2026. The expected future demand will come from:

- Young families and single working professionals moving to the community
- Seniors and older adults seeking to downsize and move closer to services and amenities
- More housing with supports for individuals who are experiencing homelessness

Table 2: Households in Core Housing Need

	2006		2011		2016	
	#	%	#	%	#	%
<i>All households in planning area</i>	800	100	775	100	695	100
Of which are in core housing need	115	14.4%	105	13.5%	95	13.7%
Of which are owner households	25	21.7%	15	14.3%	25	26.3%
Of which are renter households	90	78.3%	90	85.7%	70	73.7%

Comments:

Core housing need is a measure of housing need that was developed by CMHC (Canada Mortgage and Housing Corporation) to identify the number of households who are unable to find housing in their community that is suitable in size based on the needs of their family (not living in housing that is over-crowded) and that is in good repair (adequate) without spending 30% or more of their income on their housing costs. At the time of the 2016 Census, there were 95 households in the Village of Burns Lake who were living in housing that did not meet basic affordability standards, representing 13.7% of all households. This includes 25 owners and 70 renters, representing 6.0% of all owners and 25.5% of all renters in the Village of Burns Lake.

Table 3: Households in Extreme Core Housing Need

	2006		2011		2016	
	#	%	#	%	#	%
<i>All households in planning area</i>	800	100	775	100	695	100
Extreme core housing need	60	7.5%	55	7.1%	35	5.0%
Of which are owner households	20	33.3%	0	0.0%	20	57.1%
Of which are renter households	40	66.7%	55	100.0%	15	42.9%

Comments:

Of the households in core housing need, the 2016 Census shows that there are 35 households in extreme housing need. These are households who are spending 50% or more of their income on their housing costs and who are at increased risk of homelessness with a decrease in their income or an increase in their rent having the potential to push them into homelessness. At the time of the 2016 Census, there were 35 households in the Village of Burns Lake who were in extreme housing need. This includes 15 renter households as well as 25 owners.

Briefly summarize current and anticipated needs for each of the following:

1. Affordable housing

There is a significant need for affordable housing at all points along the housing continuum from entry-level ownership choices for young families and individuals living in the Village of Burns Lake to an expanded range of rental housing choices (market and non-market). Priorities identified through the consultation and engagement process included:

- More housing for families
- More housing for seniors
- More housing and supports for individuals experiencing homelessness
- An expanded supply of rental housing
- Targeted strategies to improve the older housing stock (investment and replacement)

2. Rental housing (market and non-market)

There is a critical shortage in the supply of rental housing in the Village of Burns Lake (market and non-market) including a shortage of rental housing for families and younger professionals moving to the community for employment. There is also a shortage of housing for low income and vulnerable seniors who are living on a fixed income.

3. Special needs housing

The Village of Burns Lake has been successful in establishing different integrated housing and support models to respond to the full diversity of needs. To a large extent these different models, as well as the different non-profit partnerships have served the community well by providing for a mix of housing that can respond to both existing as well as future housing needs. The Village of Burns Lake is fortunate in having a number of dedicated non-profit agencies and service providers who are actively engaged in working to secure funding to meet existing and on-going needs.

4. Housing for seniors

The Village of Burns Lake has a large and growing number of seniors 65 and older including a growing number of older seniors (85+). At the time of the 2016 Census, there were 190 seniors between the ages of 65 and 84 with an additional 75 seniors who were 85 and older. This translates into a total of 265 seniors or 14.9% of the total population in 2016. Based on population and growth projections prepared by B.C. Stats, it is estimated that between 2016 and 2021, the number of seniors 65 and older living the Village of Burns Lake will increase by 74 individuals, or a growth rate of 27.9%. Additionally, between 2021 and 2026 it is expected that the number of seniors 65 and older living in the Village of Burns Lake will increase by 43 individuals, representing a growth rate of 12.7%. In looking at the changing needs of an aging population, there is the need for an expanded mix of seniors' housing choices from independent seniors' housing (ownership and rental) to an expanded number of assisted living and supportive housing units.

5. Housing for families

Through the key informant interviews and the on-line survey, the need for more family housing (ownership and rental) was identified. This would include an expanded mix of entry-level ownership opportunities for families and households moving to the community for employment. In particular, a number of key informants highlighted the concern that many key workers moving to the community are looking for ownership opportunities in the long term but that it is almost impossible for these households to find rental housing in the short term as they make the transition. It was also noted that it is hard to attract people to the community if the community is unable to offer the right type of housing.

6. Housing for individuals experiencing homelessness

The Village of Burns Lake has experienced an increase in the level of homelessness with the impact of COVID-19 making the situation worse and more visible. While the community has been working closely with the Province to put temporary measures into place, longer term strategies and solutions are needed. This could include increasing the supply of studio and one-bedroom units in the community as well as working closely with local housing and service providers to ensure that appropriate wrap-around services and supports are in place. Consideration should also be given to working closely with Indigenous partners to support the development of culturally appropriate housing for Indigenous families and individuals experiencing homelessness. As well, it is worth noting that the Village of Burns Lake has been successful in putting into place multi-agency partnerships including partnerships with other levels of government (Federal, Provincial and First Nations) as a way of effectively meeting existing and emerging housing needs in the community.

7. Any other population groups with specific housing needs identified in the report

Vulnerable and 'at risk' Indigenous youth were also identified as a priority with the Friendship Centre in the Town of Smithers reporting that the problem is so severe and the housing in such short supply, they have had to buy a bus ticket to the Village of Burns Lake just to secure housing.

Were there any other key issues identified through the process of developing your housing needs report?

The quality and condition of the existing housing stock

Through the key informant interviews, concerns were raised about the quality and nature of the existing rental housing stock and the challenges that this has created. Based on the analysis of the existing inventory of housing in the Village of Burns Lake, the findings suggest that 60% of the rental housing stock was built before 1980. Furthermore, while there may be investors in the community who might consider making improvements in this housing, the current regulatory and market context does not make these types of investments economically viable. At the same time, there may be potential partnerships or other opportunities that could be considered with the right types of incentives. However, in looking at the different alternatives, these types of decisions should be evaluated against investments in new supply.

Challenging development economics in northern communities

A discussion paper prepared by the Regional District of Bulkley-Nechako highlights some of the specific challenges associated with the development of housing in Northern communities. As noted in the report, not only are the development economics for new housing construction challenging, but changes in Provincial regulations around builder registration and training and the new B.C. Step Code requirements have made it increasingly difficult. This is especially true for multi-family housing developments. In looking at potential future strategies and opportunities for action, there is a growing sense that there should be changes made to some of the existing regulations to better reflect the realities of northern communities.

POPULATION PROFILE

2.0 Population Data

This section provides information on some of the key social, demographic and population-related measures influencing the need for housing in the Village of Burns Lake. This includes information on the general level of population growth and change as well as information on the needs of specific population and household groups. The information set out in this section look at population-related measures influencing existing and future housing demand with Table 2.1 below showing the specific population-related measures influencing housing demand in Burns Lake. The darker circles on Table 2.1 signal those factors which are more likely to have a greater impact on housing demand in the Burns Lake context while the lighter circles signal less of a consideration for Burns Lake.

2.1 Population-Related Measures

TABLE 2.1 POPULATION-RELATED MEASURES

<p>Population In 2016, the population in Burns Lake was 1,779, a decrease of 250 individuals since 2011.</p>	●
<p>Regional population growth The population in the Bulkley-Nechako region decreased from 38,945 in 2011 to 37,445 in 2016, a decrease of 1,500 individuals.</p>	●
<p>Proportion of the regional population In 2016, Burns Lake accounted for approximately 5% of the population in the Bulkley-Nechako region.</p>	○
<p>Average age of the population The average age of the population in the Village of Burns Lake was 39.5 years which is consistent with the average age of the population in the region. This is slightly younger than the average age reported for the Province as a whole.</p>	●
<p>Children and youth (0 to 14 years old) There were 355 individuals in Burns Lake who were between the ages of 0 to 14, representing 20% of the population in Burns Lake in 2016.</p>	●
<p>Younger adults (15 to 19 years old) There were 115 individuals in Burns Lake who were between the ages of 15 to 19, representing 7% of the population in Burns Lake in 2016.</p>	○
<p>Younger adults (20 to 24 years old) There were 110 individuals in Burns Lake who were between the ages of 20 to 24, representing 6% of the population in Burns Lake in 2016.</p>	○
<p>Individuals 25 to 64 years old There were 940 individuals in Burns Lake who were between the ages of 25 to 64, representing 53% of the population in Burns Lake in 2016.</p>	○
<p>Seniors 65 to 84 years old There were 190 individuals in Burns Lake who were between the ages of 65 to 84, representing 11% of the population in Burns Lake in 2016.</p>	●
<p>Seniors 85 years and older There were 75 individuals in Burns Lake who were 85 years and older, representing 4% of the population in Burns Lake in 2016 and a growing segment of the population.</p>	●

2.2 Total Population

There were 1,779 individuals living in Burns Lake at the time of the 2016 Census. This represents 5% of the total population in the Regional District of Bulkley-Nechako.

HOUSING CHOICES

4.0 Housing Choices

This section includes information on the housing choices available to households living in Burns Lake and includes comparative information for the Bulkley-Nechako region and the Province as a whole. This section looks at rental and ownership options as well as different sources of rental supply. Table 4.1 highlights the measures that are most significant in terms of the mix of housing choices available in Burns Lake with the darker circles signalling those factors which are likely to have greater impact in the Burns Lake context and the lighter circles signalling less of a consideration for Burns Lake.

4.1 Measures Related to Housing Choices in Burns Lake

TABLE 4.1 MEASURES RELATED TO HOUSING CHOICES IN BURNS LAKE

<p>Single detached family housing stock Single detached housing accounted for approximately 76% of the housing stock in Burns Lake in 2016. This was also the case for 78% of the housing stock in the Bulkley-Nechako region.</p>	●
<p>Semi-detached, duplex, rowhouse and townhouse units Semi-detached, duplex, rowhouse and townhouse units accounted for 5% of the housing stock in Burns Lake and 5% of the housing stock in the Bulkley-Nechako region.</p>	●
<p>Apartment stock In 2016, there were 130 apartment units in Burns Lake, representing 19% of the total housing stock in the region. Region-wide, apartment units accounted for 6% of the total stock.</p>	●
<p>Purpose-built rental housing Traditional purpose-built rental housing is typically in the form of apartment units. At the time of the 2016 Census, Burns Lake reported a total of 130 apartment units compared to 895 apartment units across the Bulkley-Nechako region.</p>	●
<p>The secondary rental market Across the 275 renter households in Burns Lake, 47% live in purpose-built rental housing while the remaining 53% live in housing in the secondary rental market.</p>	●
<p>The age of the housing stock A large proportion of the housing stock in Burns Lake is older stock. In 2016, there were only 275 housing units built since 2001 including 100 rental and 175 ownership units.</p>	●
<p>Housing choices for households moving to the region Households moving to Burns Lake and to the Bulkley-Nechako region tend to be renters. In 2016 there were 2,555 individuals who reported that they moved to the Bulkley-Nechako region in the year prior to the Census (2015) with 340 individuals (13%) living in Burns Lake. Of those who reported that they moved to the region in 2016, 2,095 (82%) were renting.</p>	●
<p>Subsidized housing choices in Burns Lake BC Housing produces an annual Unit Count Report which shows the total number of households living in subsidized housing or receiving housing assistance across the Province. In March 2020, BC Housing reported that there were 519 individuals in the Bulkley-Nechako region who were receiving some form of housing assistance including 125 individuals living in Burns Lake.</p>	●

This section provides additional details about the different housing choices available in Burns Lake:

4.2 Single Detached Units

At the time of the 2016 Census, Burns Lake had 175 single detached housing units, a decrease of 20 units between 2011 and 2016. At the same time, the Bulkley-Nechako region reported a net decrease of 150 single detached units between 2011 and 2016.

4.14 Bedroom Size by Tenure (#)

The table below provides information on the breakdown of housing in Burns Lake by size and tenure. In general, rental units are more likely to be 1-bedroom units while ownership units are more likely to be larger units (i.e., 3 and 4+ bedroom units). Two-bedroom units have a rough 2 to 1 split between owners and renters. Due to the small number of units and the rounding of Census data, totals may not add up to 100%.

4.20 The Inventory of Non-Market Housing Choices

This section includes information on the inventory of subsidized housing available to families and individuals in different economic circumstances and lifecycle stages including:

Emergency shelter spaces: Emergency shelter spaces include housing with varying levels of support for individuals who are homeless or in crisis. Based on the most recent Unit Count Report published by BC Housing (March 2020) there were no emergency shelter units in Burns Lake.

Homeless rent supplements: Homeless rent supplements include targeted housing assistance for individuals who are homeless. Access to this assistance provides support for individuals who are homeless to access housing in the private market. Based on the most recent Unit Count Report published by BC Housing (March 2020) there were no individuals living in Burns Lake who were receiving homeless rent supplements.

Transitional and supported housing for individuals who are homeless: Transitional and supportive housing for individuals who are homeless provides housing and supports for individuals who are in crisis and who have a history of homelessness. Based on the most recent Unit Count Report published by BC Housing (March 2020) there were 21 individuals living in Burns Lake who were housed through this form of housing.

Independent social housing: Independent social housing includes family and seniors' housing funded under a mix of Federal, Federal/Provincial and Provincial housing supply programs. In Burns Lake, there are 40 units of family housing built under previous government-funded housing supply programs while region-wide there were 150 units including 114 units for families and 36 units for seniors.

Rent assistance for households living in the private market: Rent assistance for households living in the private market involves the provision of financial assistance for eligible households to help cover the gap between the cost of their housing and the amount of rent that they can afford to pay based on the resources that they have available. Based on the most recent Unit Count Report published by BC Housing (March 2020) there were 10 households in Burns Lake receiving assistance under the SAFER and RAP programs.

Assisted living for seniors: Assisted living for seniors includes housing that is available for seniors who require some level of support in order to maintain their independence. BC Housing reported 14 units of assisted housing for seniors in Burns Lake.

Group homes and special needs housing: Group homes and special needs housing include different types of housing and shared living arrangements for persons with disabilities including housing for individuals with cognitive or developmental disabilities. BC Housing reported 6 units of this type of housing in Burns Lake.

Transitional housing for women and children fleeing violence: Transitional housing for women and children fleeing violence is housing that includes supports for women and children who need temporary accommodation and support. BC Housing reported 6 units of this type of housing in Burns Lake as well as a total of 41 units region-wide.

TABLE 4.20 INVENTORY OF SUBSIDIZED HOUSING UNITS

	Province	Region	Village of Burns Lake
Emergency shelter space	2,098	6	0

Service Allocation – Homeownership	--	--	--
Total Inventory of Subsidized Housing	110,465	519	125

Source: BC Housing Research and Corporate Planning, Unit Count Reporting Model, March 2020

² Households receiving assistance under the RAP program receive the difference between the cost of their housing and the amount of rent that they can afford to pay up to a maximum rent ceiling of \$1,067 for a family of 3 and \$1,117 for a family of 4.

³ Households receiving assistance under the SAFER program receive the difference between the cost of their housing and the amount of rent that they can afford to pay up to a maximum rent ceiling of \$734.

INCOME PROFILE AND HOUSING COSTS

5.0 Income and Housing Cost

Income plays a central role in determining the housing choices available to families and individuals. This section provides information on the housing costs and incomes for households living in the Village of Burns Lake as well as comparative information for the Regional District of Bulkley-Nechako and the Province as a whole. Table 5.1 provides information on the general income and housing cost profile including specific considerations related to housing affordability as well as future housing choices. The darker circles highlight factors which can affect the mix of housing choices available to families and individuals in Burns Lake including housing cost and affordability pressures.

5.1 Indicators and Outcomes Related to Housing Costs

TABLE 5.1 KEY HOUSING INDICATORS AND OUTCOMES RELATED TO HOUSING COSTS

<p>Average household income In 2016, the average household income in Burns Lake was \$76,643 (2015 incomes) which was \$10,221 below the average household income for the region.</p>	●
<p>Median household income In 2016, the median household income in Burns Lake was \$68,284 (2015 incomes) which was \$3,250 below the median household income for the region.</p>	●
<p>Affordability threshold for households in low and very low income Households in low and very low incomes are households with an annual income that is between 30% and 50% of the area median income (AMI) which is typically set at the median regional income. Based on the 2016 Census, the median household income for the Regional District of Bulkley-Nechako was \$76,549 which means that the affordability threshold for households with low or very low incomes was between \$22,965 and \$38,275 and an affordable rent or housing cost for these households is between \$574 to \$957 per month.</p>	●
<p>Affordability threshold for households in low and low to moderate income Households in low and low to moderate incomes are households with an annual income that is between 50% and 80% of the area median income (AMI). Based on the median income of \$76,549 for the Bulkley-Nechako region, the affordability threshold for a household with low or low to moderate incomes is between \$38,275 and \$61,239. An affordable rent or housing cost for these households is between \$957 to \$1,531 per month.</p>	●
<p>Household incomes In 2016, there were 155 households in Burns Lake with an annual income of \$35,000 or less. This represents 22% of total households. There were also 55 households living in Burns Lake with an annual income of less than \$20,000, 8% of all households.</p>	●
<p>The cost of ownership Ownership costs in Burns Lake are more affordable when compared to the broader Bulkley-Nechako region. Based on 2016 Census, average monthly housing costs reported across owners in the Burns Lake was \$849 per month compared to \$905 per month across the Bulkley-Nechako region.</p>	●
<p>The cost of renting Renting in Burns Lake is more affordable when compared to the broader Bulkley-Nechako region. Based on 2016 Census, the average monthly housing cost reported across renters in Burns Lake was \$776 per month compared to \$812 for the Bulkley-Nechako region.</p>	●

This section provides additional details related to the household incomes and housing costs in the Village of Burns Lake:

5.2 Income Distribution of All Households

At the time of the 2016 Census, 22% of households living in Burns Lake (155) had an annual income of less than \$35,000 including 8% of households (55) who had an annual income of less than \$20,000. An additional 14% of households (95) had an annual income between \$35,000 and \$50,000 while 160 households (23%) had an annual income of between \$50,000 and \$80,000. There were also 285 households (41%) with an annual income of \$80,000 or more. Across the Bulkley-Nechako region, there was a larger proportion of households with an annual income of more than \$80,000 (48%) when compared to Burns Lake (41%).

HOUSING NEED

6.0 Housing Need

This section includes information on the different measures related to housing needs in the Village of Burns Lake including considerations related to the adequacy (i.e. the condition of the housing stock), the suitability (i.e. the level of crowding) and affordability (i.e. the number of households spending 30% or more of their income on their housing costs). This section also includes information on the number of households in core housing need including those who are in extreme housing need (i.e. households spending 50% or more of their income on their housing costs).

6.1 Key Measures Related to Housing Needs

TABLE 6.1 KEY MEASURES RELATED TO HOUSING NEEDS

<p>Households falling below suitability standards (i.e. conditions of crowding) At the time of the 2016 Census, there were 20 households in Burns Lake who were living in housing that fell below the established suitability standards (3% of all households). This included 9% of all renter households.</p>	●
<p>Households falling below adequacy standards (i.e. condition of the stock) At the time of the 2016 Census, there were 115 households in Burns Lake who were living in housing that fell below the established adequacy standards (16% of all households). This included 18% of all renter households.</p>	●
<p>Households falling below affordability standards (i.e. shelter-cost-to-income of 30%) At the time of the 2016 Census, there were 100 households in Burns Lake who were living in housing that fell below the established affordability standards (14% of all households). This included 24% of all renter households.</p>	●
<p>Households in core housing need At the time of the 2016 Census, there were 95 households in Burns Lake who were in core housing need (14% of all households). This included 26% of all renter households.</p>	●
<p>Households in extreme housing need At the time of the 2016 Census, there were 35 households in Burns Lake in extreme housing need (5% of all households). This included 6% of all renter households. These were households who were spending 50% or more of their income on their housing costs and who are considered at increased risk of homelessness through economic eviction.</p>	●
<p>Individuals experiencing homelessness The community has reported an increase in the number of individuals experiencing homelessness and is undertaking some additional research to understand the specific nature of this need.</p>	●

6.2 Households Falling Below Suitability Standards

Suitability applies to households that are unable to find housing that is suitable in size based on the needs of their household and Canada's National Occupancy standards. Households that are living below the suitability standard are typically households that are living in over-crowded conditions as a way of reducing their housing costs. At the time of the 2016 Census, there were 20 households in Burns Lake living in housing that fell below the established suitability standard (3% of the total housing stock), all of which were renter households. Across the Bulkley-Nechako region, there were 395 households who were living in housing that was not suitable based on their household needs (3% of the total - housing stock). Almost two in 3 of these households (65%) were owners while the remaining 34% were renters.

6.3 Households Falling Below Adequacy Standards

Adequacy applies to households that are unable to find housing that is in good repair that they can afford with the resources that they have available. Households that are living below the adequacy standard are typically households living in older housing stock that is in poor condition and that requires significant repairs or improvements. At the time of the 2016 Census, there were 115 households in Burns Lake who were living in housing falling below the established adequacy standard (16% of all households). Owners make up 61% of all households living below the adequacy standard while renters comprise 44% of the total. Region-wide, there were 1,335 households who were living in housing which fell below the adequacy standard, representing 10% of the total stock. Owners make up more than three in 4 (76%) of those living below the adequacy standard in the Bulkley-Nechako region while renters comprise 25%.

7.4 Employment Rate

In 2016, the Village of Burns Lake reported an employment rate of 56% compared to 58.6% across the Regional District of Bulkley-Nechako. The employment rate in the Village of Burns Lake was also lower than the rate reported for the Province (59.6%). While the 2016 employment rate was up slightly from 2011, it was the same as the employment rate in 2006.

7.5 Unemployment Rate

In 2016, the Village of Burns Lake reported an unemployment rate of 13.6% compared to an unemployment rate of 12.3% across the Regional District of Bulkley-Nechako. Between 2011 and 2016, the unemployment rate in the Village of Burns Lake increased from 12.1% to 13.6%, an increase of 1.5%. Across the Regional District of Bulkley-Nechako, between 2011 and 2016, the unemployment rate increased from 10.5% to 12.3%, an increase of 1.8%. The Provincial unemployment rate of 6.7% in 2016, approximately half that of the Village of Burns Lake.

7.6 Labour Market Participation Rate

In 2016, the Village of Burns Lake reported a labour market participation rate of 64.4%, up from 63.4% in 2011. Across the Regional District of Bulkley-Nechako, the labour market participation rate was 69.9%, up from 67.8% in 2011. The labour market participation rate in the Village of Burns Lake in 2016 was lower than the corresponding rate in the Regional District of Bulkley-Nechako but slightly higher than the rate experienced across the Province as a whole (63.9%).

7.7 Travel to Work

In 2016, of those in the labour force in the Village of Burns Lake, 595 individuals (67%) lived and worked in the Village of Burns Lake. At the same time, 65 individuals (7%) lived in the Village of Burns Lake but traveled to another part of the Regional District of Bulkley-Nechako for work. There were also 10 individuals who were living the Village of Burns Lake and who travelled to a different region to work (1%). Individuals who were not working at the time, who do not commute to work or who travelled to work outside of British Columbia were not included in this total.

8.0 Community and Stakeholder Feedback

8.1 Results of the Village of Burns Lake Housing Survey

In looking at the diversity of housing needs in Burns Lake, a Community Housing Needs Survey was prepared by staff and administered through local community networks as well as on-line. There were 162 individuals who responded to this survey. This section provides an overview of some of the key findings and insights gained. Questions included in the survey explored:

- Satisfaction with their current housing situation
- Future housing plans and perceived housing needs
- Housing-related priorities for the community
- Considerations around housing affordability
- Concerns around the need for more rental housing
- Considerations related to the diversity of housing needs in the community
- Considerations related to the specific need for supportive or special needs housing.

Of those who responded to the survey, 100 individuals (62.5%) were from the Village of Burns Lake, 53 respondents were from Electoral Area B or E (33.1%) and 7 respondents lived on one of the surrounding First Nations communities (4.4%). There were also two (2) individuals who did not respond to this question.

Age profile of respondents

Of the 162 individuals who responded to the survey:

- 9 respondents (5.6%) were under the age of 25
- 42 respondents (25.9%) were between the ages of 26 and 35
- 88 respondents (54.3%) were between the ages of 36 and 55
- 23 respondents (14.2%) were 55 and older.

Tenure profile

Of the 162 individuals who responded to the survey:

- 108 respondents (66.7%) were owners
- 40 respondents (24.7%) were renters.
- 14 respondents (8.6%) reported that they live with family or friends and do not pay rent.

Satisfaction with their housing situation

Respondents were asked to indicate if they were generally satisfied with their housing situation. Of those who responded:

- 54 respondents (33.3%) reported that they were fully satisfied
- 54 respondents (33.3%) felt mostly satisfied
- 25 respondents (15.4%) felt okay about their housing situation
- 29 respondents (17.9%) were not satisfied with their housing situation
- 11 respondents (6.8%) were not at all satisfied with their housing situation.

Future housing plans

When asked about their future housing plans and anticipated needs in the next 3 to 5 years:

- 104 respondents (64.2%) reported that they felt that their needs would change
- 55 respondents (34.0%) reported that they did not believe that their needs would change
- 3 respondents (1.9%) reported that they were unsure if their needs would change.

Top 3 housing needs or priorities

Respondents were asked to share their feelings on the top three housing needs or priorities in the Village of Burns Lake based on their perceived needs and/or the needs that they see in the community. Of those who responded to the survey:

- 95 respondents (59.4%) identified lack of housing for families as a priority
- 87 respondents (54.4%) identified lack of ownership choices as a priority
- 79 respondents (49.4%) identified affordability of housing for renters as a priority
- 75 respondents (46.9%) identified suitability of housing for seniors as a priority
- 66 respondents (41.3%) identified the condition of the existing housing as a priority
- 35 respondents (21.9%) identified the suitability of the existing housing as a priority
- 23 respondents (14.4%) identified the affordability of ownership as a priority.

Housing affordability

When asked to identify the extent to which housing affordability is perceived as an issue for the Village of Burns Lake, 104 individuals (64.2%) responded to this question while 58 respondents (35.8%) did not answer this question. Of those who responded:

- 49 respondents (47.1%) identified housing affordability as an issue
- 33 respondents (31.7%) reported that they were relatively neutral on housing affordability although it may be an issue
- 22 respondents (21.2%) indicated that they do not consider housing affordability to be an issue

The need for more rental housing in Burns Lake

When asked if they felt a need for more rental housing in Burns Lake:

- 136 respondents (84.5%) felt that there was a need
- 25 respondents (15.5%) were unsure as to whether there was a need
- 4 respondents (2.5%) did not see a need

Housing types

When asked about the type of housing that is needed in Burns Lake, the following was the mix of responses received:

- 102 respondents (64.2%) saw the need for more family housing (townhouse and row house stock)
- 67 respondents (42.1%) saw the need for more singly family housing
- 63 respondents (39.6%) saw the need for more ground-oriented seniors housing
- 43 respondents (27.0%) saw the need for more apartment units
- 16 respondents (10.1%) identified other types of housing that they felt should be considered

Support for increasing the supply and diversity of housing in Burns Lake

The survey included a question which noted that other communities had been successful in experimenting with different types of housing, and which asked whether there was support for the same type of experimentation in Burns Lake. Of those who responded:

- 91 respondents (56.2%) reported that they felt that experimentation with different types of housing might benefit Burns Lake
- 63 respondents (38.9%) reported that they would need to have more information about the different types of housing being considered
- 8 respondents (5%) indicated that they did not see any benefit in exploring or adopting different types of housing

The need for more supportive housing

In looking at the housing needs in the community, the survey noted that supportive housing typically combines housing assistance with individualized, flexible and voluntary supports and service for people with diverse housing and support needs. This includes housing for people with physical disabilities, mental health or other related challenges including substance use, and housing to support individuals with developmental or cognitive challenges. Of those who responded to the survey:

- 120 respondents (74.5%) believe there is the need for more supportive housing in Burns Lake
- 29 respondents (18.0%) were unsure about the need for more supportive housing
- 12 respondents (7.4%) did not believe there was a need for any additional supportive housing

8.2 Key Themes Arising From the Stakeholder Engagement

During July and August, SPARC BC contacted a preliminary sample of stakeholders to learn more about specific housing needs or priorities for the community. The following reflect some of the key themes or ideals which were raised:

- *There are significant housing needs in this community and a shortage of housing available to households wanting to move the community.*
- *The cyclical nature of the economy and access to economic opportunities has definitely created pressure on the available housing supply and there is not much new housing available.*
- *Burns Lake has been successful in creating ownership opportunities. However, these opportunities are not necessarily available to all households including those with limited incomes, limited access to economic opportunities and seniors with changing social and economic circumstances.*
- *There is a shortage of housing for key workers which make it difficult for the recruitment and retention of professionals (nurses, teachers, as well as other professionals). In particular, most workers moving to the community are looking for rental housing at least in the short-term as they re-establish their family. However, those who are looking to stay typically move into ownership.*
- *Housing for households with low to moderate incomes is always a need and seniors' housing is also in short supply.*

- *There are a number of single parent family households who are struggling in the community. Recently, the community has had success in creating an expanded range of housing choices for women fleeing violence. This was done in partnership with the Indigenous community.*
- *There is a clear need for this type of supported housing which includes both housing as well as wrap around services. Burns Lake is fortunate to have a number of excellent non-profit organizations who are working to build a more complete picture of the needs of those who are homeless or 'at risk' of homelessness and who live in the community.*
- *The age of the housing stock is one of the greatest challenges that the community faces both in terms of both ownership and rental housing.*
- *In the case of the ownership stock, it is possible that an individual can purchase a home, but they may not have the resources needed to bring the housing up to standard. This means that even a cheaper home is expensive. As well, the age of the home and the condition of the housing can also affect the amount of financing that is available for improvements.*
- *Much of the rental housing stock is older and in need of repairs. While there may be some in the community who would invest in making improvements in the housing, within the current regulatory and market contexts, there is no economic incentive to make the types of investments needed (i.e. there is not the needed return on investment).*
- *Workforce housing is needed and finding ways to address this shortage has been a significant issue for the community. Many key workers moving to the community are looking for ownership opportunities in the longer term but it is almost impossible for these households to find rental housing in the short term as they make the transition.*
- *There is a shortage of seniors housing. This includes a shortage of independent seniors' housing as well as supportive housing. The existing facilities are currently full and there is a waiting list to get into the housing.*
- *There is the need for the community to explore different types of housing models (ownership and rental) to provide for an expanded range of housing choices. This should include an expanded mix of fourplex and six plex developments as well as consideration of secondary suites, row house and coach house units where appropriate.*
- *While the community has been successful in coming together to add new supply (in some cases), much of the available housing stock is quite old and is in need of significant investments and upgrades. Finding suitable and appropriate housing is definitely an issue. As well, securing financing to support the types of improvements and upgrades needed is also an issue.*
- *The community has been successful in working in partnership with the First Nations communities in the area. In particular, the community is currently benefiting from a new transitional/supportive housing development that First Nations partners helped to build.*

- *There is a shortage of family housing for rent. As well, there are significant challenges in terms of the needs of seniors with many senior-led households being limited in their ability to do the types of repairs that are needed. As well, it can be difficult to find the people who can help with the needed repairs or improvements.*
- *There is the need for more adaptable and accessible housing. For the most part the need for this type of housing is being met through the seniors' housing portfolio where adjustments have been made to accommodate the changing needs of an aging population. However, as the population ages, there is the need for more of this type of housing investment. Responding to this issue is particularly important as people do not want to leave the community they know.*
- *There is a shortage of assisted living and the waiting list for this type of housing can be quite extensive. Some individuals who need of this type of housing are forced to move out of the community and/or face long waiting times (i.e., more than a year to access this housing).*
- *The community is seeing increasing levels of homelessness including an increasing number of individuals experiencing different types of challenges.*
- *The most significant issue in the community is the age of the housing stock and the need for new investments. This would include both the need for new supply as well as investments or funding to help to improve the quality and condition of the current stock.*
- *Increasing the supply and diversity of housing choices is essential. Current supply constraints mean the families and individuals are having a difficult time finding the housing that they need.*
- *Rental housing is under significant pressure. There is no affordable stock to move into – rental housing prices are high and units are full. This is particularly challenging for key workers moving to the community (i.e. people have jobs, but they cannot get into the housing). It is hard to attract people to the community if the community is unable to offer the right type of housing.*
- *Supply constraints force families to live in "motels" as they search for housing.*
- *There is benefit in exploring a diversity of housing types if they serve the needs of the community need. This should include coach houses, row houses, fourplexes, sixplexes, mixed tenure models. There is also the need for more seniors' housing including supportive seniors housing.*
- *The issues around affordable housing comes down to the quality of housing or lack of quality. In many ways the housing in the community is reasonably priced but many of the homes are older homes and are in significant need of repairs and upgrades.*
- *Perhaps there are opportunities for targeted programs that focus on providing funding to support/encourage investments in upgrading the existing housing stock. Opportunity for potential partnerships with local builders, developers, lenders and local government partners which provide incentives to support improvements and upgrades to the existing stock should be explored.*

ESTIMATED DEMAND

9.1 Current and Future Housing Needs

In preparing a *Housing Needs Report*, local governments are required to develop estimates related to:

- Anticipated population and household growth over a 5-year time frame
- Anticipated changes in average and median age
- Changes in the demographic profile of individuals and households
- Estimated future housing demand by housing type, tenure, and bedroom size
- Estimated future demand by affordability (market and non-market)

This report sets out the methodology used to prepare the population and household projections for the Village of Burns Lake and includes considerations related to:

- Historical trends and patterns of growth
- Expected growth locally and regionally
- Changes in the social and demographic profile of households living in the Village of Burns Lake

9.2 Methodology

Statistics Canada, through the Census, provides the most reliable and comprehensive source of baseline and trend data for population and housing demand projections. This includes considerations related to:

- Historical patterns of growth (regional and locally)
- Changes in the general population and age profile of households in the region
- Intra-and inter-provincial migration
- Patterns of housing consumption and current housing demand
- Current housing demand by housing size and type

The process used in preparing the proposed population and household growth projections for the Village of Burns Lake included the following steps:

- The creation of a baseline scenario using the 2016 Census data
- Analysis of historical and recent population and household trends
- Consultation with key stakeholders from across the community
- Analysis of expected employment related growth within the region
- An examination of changes in the general population and age profile for the region
- Comparison with the expected population and household growth projections using information available through B.C. Stats (P.E.O.P.L.E. 2020) at the Regional District and Local Health Area level

9.3 Estimated Population Growth

Like many other northern communities and regions, the Regional District of Bulkley-Nechako and the Village of Burns Lake are subject to significant shifts in population resulting from broader social and economic forces. In 2016, the total population for the Regional District of Bulkley-Nechako was 37,445 individuals, while the population for the Village of Burns Lake was 1,779 individuals accounting for 4.8% of the total population in the RDBN.

In looking at the historical patterns of growth, the Census shows that between 2006 and 2011 the population for the Regional District of Bulkley-Nechako grew by 1,015 individuals, representing a population growth rate of 2.7%. However, between 2011 and 2016, the population in the Regional District of Bulkley-Nechako decreased by 1,500 individuals, resulting in a negative population growth rate of 3.9%.

Population projections prepared by B.C. Stats through P.E.O.P.L.E 2020 estimate that between 2016 and 2021 the population in the Regional District of Bulkley-Nechako will increase by 592 individuals or a growth rate of 1.6%. This expected rate of growth represents an average annual increase of 118 individuals, or a growth rate of 0.3%.

Between 2021 and 2026, the population in the Regional District of Bulkley-Nechako is expected to increase by an additional 3,201 individuals or a growth rate of 1.6%. This expected rate of growth represents an average annual increase of 640 individuals, or a growth rate of 1.7%.

Historically, the population in the Village of Burns Lake has continued to experience significant fluctuation and change (not unlike many smaller, northern communities). Between 2006 and 2011, the Village of Burns Lake reported a small decrease of 78 individuals, or a negative growth rate of 3.7%. This negative growth represents an average decrease of in the population of 16 individuals.

Between 2011 and 2016, while the Regional District of Bulkley-Nechako reported a net decrease in the population of 1,500 individuals, or negative growth of 3.7%, the Village of Burns Lake reported a decrease of 250 individuals, or negative growth of 12.3%.

The significant fluctuation in the population in the Village of Burns Lake is consistent with the types of changes experienced across many smaller, northern communities in B.C. and can be a function of the aging of the population as well as the cyclical nature of the local economy. In looking forward to 2016 to 2026, B.C. Stats estimates that the Burns Lake Local Health Area will experience positive population growth.

In using the population and household projections for the Burns Lake Local Health Area as a general model for understanding future growth and changes within the local context, the findings suggest that the population for the Village of Burns Lake will begin to increase in 2019 with an expected increase of 28 individuals between 2019 and 2021, or an increase of approximately 9 individuals annually. For 2021 to 2026, the Village of Burns Lake is expected to grow by an additional 98 individuals for an average annual increase of 20 individuals per year.

The analysis shows that between 2016 and 2026, the Village of Burns Lake will experience a period of expansion and growth, compared to the previous Census period which included 2006 to 2016.

TABLE 9.1: PROJECTED POPULATION GROWTH (RDBN AND VILLAGE OF BURNS LAKE)

Years	Regional District of Bulkley-Nechako			Village of Burns Lake		
	Population	Population Change	Rate of Growth	Population	Population Change	Rate of Growth

2024	40,217	657	1.7%	1,744	20	1.2%
2025	40,876	659	1.6%	1,764	21	1.2%
2026	41,538	662	2.0%	1,785	21	1.2%

Source: Calculated by SPARC BC based on Local Health Area Projections, B.C. Stats (P.E.O.P.L.E. 2020)

9.4 Estimated Household Growth

In 2016, there were 15,100 households living in the Regional District of Bulkley-Nechako including 2,290 households living in the Village of Burns Lake, with the households living in the Village of Burns Lake accounting for 15.2% of all households in the Regional District of Bulkley-Nechako.

In looking at the historical patterns of growth, the Census shows that between 2006 and 2011 the total number of households in the Regional District of Bulkley-Nechako increased by 635 households, or a growth rate of 4.4%. However, between 2011 and 2016, the total number of households in Regional District of Bulkley-Nechako decreased by 85 households, or a negative growth rate of 0.6%.

Population and household projections prepared by B.C. Stats under P.E.O.P.L.E.2020 estimate that between 2016 and 2021 the total number of households in the Regional District of Bulkley-Nechako will increase by 1,613 households, or a growth rate of 10.7%. Annually this represents an average increase of 323 households, or a growth rate of 2.1%.

Between 2021 and 2026, B.C. Stats estimates that the total number of households in the Regional District of Bulkley-Nechako will increase by an additional 1,437 households, or a growth rate of 8.6%. This translates into an average annual increase of 287 households, or a growth rate of 1.7%.

Assuming that the Village of Burns Lake experiences a similar pattern of household growth to the expected growth within the Regional District of Bulkley-Nechako as a whole, it is likely that between 2016 and 2021, the total number of households in the Village of Burns Lake will increase by 258 households, representing a growth rate of 11.2%. This translates into an average annual increase of 52 households for the Village of Burns Lake, or a growth rate of 2.0%.

For 2021 to 2026, assuming that the pattern of household growth within the Village of Burns Lake continues to remain similar to the expected household growth for the Regional District of Bulkley-Nechako as a whole, the total number of households in the Village of Burns Lake is expected to increase

by an additional 223 households, or a growth rate of 8.8%. This translates into an average annual increase of 45 households, or a growth rate of 1.7%.

In looking at the expected household growth for the Regional District of Bulkley-Nechako between 2016 and 2021, compared to the expected household growth for the Village of Burns Lake, the findings suggest that the expected household growth for the Village of Burns Lake is equal to 15.9% of the expected household growth for the Regional District of Bulkley-Nechako. Similarly, from 2021 to 2026, the expected household growth for the Village of Burns Lake is equal to 15.5% of the expected household growth for region.

The analysis also shows that the expected household growth for the Village of Burns Lake between 2016 and 2026 is equal to 2.3 times the household growth reported in the Census for the Village of Burns Lake in the prior 10 year period (i.e. between 2006 and 2016). Specifically, the Village of Burns Lake experienced an increase of 210 households between 2006 and 2016 compared to an expected increase of 482 households between 2016 and 2026.

TABLE 9.2: ESTIMATED HOUSEHOLD GROWTH (RDBN AND VILLAGE OF BURNS LAKE)

Years	Regional District of Bulkley-Nechako			Village of Burns Lake		
	Total Households	Increase/ Decrease	% Change	Total Households	Increase/ Decrease	% Change

9.5 Changing Demographics –25 to 64 years of age

In 2016, there were 20,305 individuals in the Regional District of Bulkley-Nechako who were in the 25 to 64 age cohort including 940 individuals living in the Village of Burns Lake.

Analysis of historical data for the Regional District of Bulkley-Nechako shows that between 2006 and 2011, the total number of individuals between the ages of 25 to 64 living in the RDBN increased by 405 individuals, a growth rate of 2.0%. However, between 2011 and 2016, the total number of individuals between the ages of 25 to 64 living in the RDBN decreased by 765, or a negative growth rate of 3.6%.

Between 2006 and 2011, the Village of Burns Lake reported no change in the number of individuals between the ages of 25 to 64. Between 2011 and 2016, the Village of Burns Lake reported a decrease of 75 individuals in the 25 to 64 age cohort, representing a negative growth rate of 7.4%.

Population projections prepared by B.C. Stats through P.E.O.P.L.E. 2020 estimate that between 2016 and 2021, the population in the 25 to 64 age cohort in the RDBN will increase by 396 individuals,

representing a growth rate 2.0%. This translates into an average annual increase of 79 individuals in the 25 to 64 age cohort, or a growth rate of 0.4%.

Between 2021 and 2026, B.C. Stats estimates that the population in the 25 to 64 age cohort in the RDBN will increase by an additional 1,204 individuals, representing a growth rate of 5.8%. The expected increase in individuals in the 25 to 64 age cohort translates into an average annual increase of 241, or a growth rate of 1.2%.

While B.C. Stats does not prepare population projections at the community level, population projections at the Local Health Area level can help to provide meaningful insights into differences across different geographic areas. For 2016 to 2021, assuming that the pattern of growth within the Village of Burns Lake is similar to the expected pattern of growth for the Burns Lake Local Health Area, the population in the Village of Burns Lake in the 25 to 64 age cohort is expected to decrease by 344 individuals, a negative rate of growth of 9.6%. This translates into an average annual decrease of 69 individuals or -1.9%. Between 2021 and 2026, it is estimated that the Village of Burns Lake will experience an increase of 107 individuals in the 25 to 64 age cohort, or a rate of growth of 3.2%. This translates into an average annual increase of 21 individuals in the 25 to 64 age cohort, or a growth rate of 0.6% among those between the ages of 25 to 64 living in Burns Lake.

This expected growth is in contrast to the results from the previous Census period (2006 to 2016) which experienced a net decrease of 75 individuals in this age cohort.

TABLE 9.3: PROJECTED POPULATION GROWTH IN 25-64 AGE COHORT (RDBN AND VILLAGE OF BURNS LAKE)

	Regional District of Bulkley-Nechako			Village of Burns Lake		
	Number	Increase	%	Number	Increase	%
2016	20,305			940		
2017	20,420	115	0.6%	864	-76	-8.1%
2018	20,349	-71	-0.3%	858	-6	-0.7%
2019	20,346	-3	0.0%	843	-15	-1.7%
2020	20,554	208	1.0%	847	5	0.6%
2021	20,701	147	0.7%	851	4	0.4%

9.6 Changing Demographics –65 to 84 years of age

In 2016, there were 5,080 individuals in the Regional District of Bulkley-Nechako who were in the 65 to 84 age cohort including 190 individuals living in the Village of Burns Lake.

Analysis of historical data for the Regional District of Bulkley-Nechako shows that between 2006 and 2011, the total number of individuals between the ages of 65 to 84 living in the RDBN increased by 725 individuals, a growth rate of 19.8%. Similarly, between 2011 and 2016, the total number of individuals between the ages of 65 to 84 living in the RDBN increased by an additional 700, or a growth rate of 16.0%.

Between 2006 and 2011, the Village of Burns Lake reported no change in the number of individuals between the ages of 65 to 84. Between 2011 and 2016, the Village of Burns Lake reported a decrease of 40 individuals in the 65 to 84 age cohort, representing a growth rate of 19.2%.

Population projections prepared by B.C. Stats through P.E.O.P.L.E. 2020 estimate that between 2016 and 2021, the population in the 65 to 84 age cohort in the RDBN will increase by 400 individuals, representing a growth rate 7.9%. This translates into an average annual increase of 80 individuals in the 65 to 84 age cohort, or a growth rate of 1.6%.

Between 2021 and 2026, B.C. Stats estimates that the population in the 65 to 84 age cohort in the RDBN will increase by an additional 1,441 individuals, representing a growth rate of 26.3%. The expected increase in individuals in the 65 to 84 age cohort translates into an average annual increase of 288, or a growth rate of 5.3%.

While B.C. Stats does not prepare population projections at the community level, population projections at the Local Health Area level can help to provide meaningful insights into differences across different geographic areas.

For 2016 to 2021, assuming that the pattern of growth within the Village of Burns Lake is similar to the expected pattern of growth for the Smithers Local Health Area, the population in the Village of Burns Lake in the 65 to 84 age cohort is expected to increase by 207 individuals, or a growth rate of 29.0%. This translates into an average annual increase of 41 individuals in the 65 to 84 age cohort, or a growth rate of 5.8% among those between the ages of 65 to 84.

Assuming a similar pattern of growth for the Village of Burns Lake for 2021 to 2026, it is likely that the population in 65 to 84 age cohort will increase by an additional 238 individuals, or a growth rate of 25.8%. This translates into an average annual increase of 48 individuals in the 65 to 84 age cohort, or a growth rate of 5.2% among those between the ages of 65 to 84.

In comparing the expected population growth for individuals in the 65 to 84 age cohort for the RDBN between 2016 and 2026, and the expected population growth for individuals in the 65 to 84 age cohort for the Village of Burns Lake, the findings suggest that the expected population growth for individuals in the 65 to 84 age cohort for the Village of Burns Lake is equal to 24.1% of the expected population growth in this age cohort for the RDBN. The analysis also shows that the expected population growth for individuals in the 65 to 84 age cohort for the Village of Burns Lake between 2016 and 2026 is equal to almost 2 times the population growth for this age cohort reported in the Census for the Village of Burns Lake in the prior 10 year period (i.e. between 2006 and 2016).

TABLE 9.4: PROJECTED POPULATION GROWTH IN 65-84 AGE COHORT (RDBN AND VILLAGE OF BURNS LAKE)

	Regional District of Bulkley-Nechako	Village of Burns Lake
--	--------------------------------------	-----------------------

9.7 Changing Demographics –85 and older years of age

In 2016, there were 560 individuals in the Regional District of Bulkley-Nechako who were 85 and older including 140 individuals living in the Village of Burns Lake.

Analysis of historical data for the Regional District of Bulkley-Nechako shows that between 2006 and 2011, the total number of individuals who were 85 and older living in the RDBN increased by 120 individuals, a growth rate of 36.9%. Similarly, between 2011 and 2016, the total number of individuals 85 and older living in the RDBN increased by an additional 115, or a growth rate of 25.8%.

Between 2006 and 2011, the Village of Burns Lake reported an increase of 30 individuals 85 and older, representing a growth rate of 40.0%. Between 2011 and 2016, the Village of Burns Lake reported an additional increase of 35 individuals 85 and older representing a growth rate of 33.3%.

Population projections prepared by B.C. Stats through P.E.O.P.L.E 2020 estimate that between 2016 and 2021, the population 85 and older in the RDBN will increase by 67 individuals, representing a growth rate of 12.0%. This translates into an average annual increase of 13 individuals 85 and older, or a growth rate of 2.4%.

Between 2021 and 2026, B.C. Stats estimates that the population 85 and older living in the RDBN will increase by an additional 115 individuals, representing a growth rate of 18.3%. The expected increase in individuals 85 and older translates into an average annual increase of 23, or a growth rate of 3.7%.

While B.C. Stats does not prepare population projections at the community level, population projections at the Local Health Area level can help to provide meaningful insights into differences across different geographic areas.

For 2016 to 2021, assuming that the pattern of growth within the Village of Burns Lake is similar to the expected pattern of growth for the Smithers Local Health Area, the population in the Village of Burns Lake 85 and older will increase by 26 individuals, or a growth rate of 15.7%. This translates into an average annual increase of 5 individuals 85 and older, or a growth rate of 3.1% among those 85 and older.

Assuming a similar pattern of growth for the Village of Burns Lake for 2021 to 2026, it is likely that the population 85 and older will increase by an additional 49 individuals, or a growth rate of 29.5%. This

translates into an average annual increase of 10 individuals 85 and older, or a growth rate of 5.9% among those 85 and older.

In comparing the expected population growth for individuals 85 and older living in the RDBN between 2016 and 2026, and the expected population growth for individuals 85 and older in the Village of Burns Lake, the findings suggest that the expected population growth for individuals 85 and older in the Village of Burns Lake is equal to 41.2% of the expected population growth in this age cohort for the RDBN. The analysis also shows that the expected population growth for individuals in the 85 and older age cohort for the Village of Burns Lake between 2016 and 2026 is equal to 1.15 times the population growth for this age cohort reported in the Census for the Village of Burns Lake in the prior 10 year period (i.e. between 2006 and 2016).

TABLE 9.5: PROJECTED POPULATION GROWTH IN 85+ AGE COHORT (RDBN AND VILLAGE OF BURNS LAKE)

	Regional District of Bulkley-Nechako			Village of Burns Lake

APPENDIX B

GLOSSARY & DEFINITIONS

Affordability: Average household income refers to the income of a specified group that is calculated by dividing the aggregate income by the total number of individuals or households identified in the sample or Census universe.

Apartment duplex: Apartment duplex is a Census term that refers to an apartment or flat in a duplex or accessory dwelling unit in a building that has fewer than 5 storeys.

Average household income: Average household income refers to the income of a specified group that is calculated by dividing the aggregate income by the total number of individuals or households identified in the sample or Census universe.

Band Housing: Band housing is a Census term that is used for historical reasons to define the shelter occupancy of housing for First Nations people whose form of housing does not lend itself to the usual classification of tenure (ownership and rental).

Census families: Census families is a Census term that refers to households living in private households in various types of family and household arrangements. Census families can include spouses who are married as well as common-law spouses and can include households both with and without children.

Core housing need: A household is considered to be in core housing need if they are unable to find housing in their community that is suitable in size and in good repair without spending 30% or more of their income on their housing costs.

Employment income: Employment income is the income received from wages, salaries, and commissions and is typically reported at the individual level.

Full-time employment: Full-time employment is reported in the Census as a full-year and full-time worker that includes individuals aged 15 and older who worked more than 30 hours per week for a minimum of 49 weeks of the year.

Household income: Household income is a Census term that refers to the total household income received from all sources including employment income, investments, pensions, and other sources including government sources. Household income is reported at the household level.

Household size: Household size is a Census term that refers to the number of persons in a private household.

Housing condition: Housing condition is one of the dimensions of housing need under Canada's Core Housing Need Definition and includes considerations around the adequacy or condition of the housing including the number of units that are in need of major repairs. In particular, a household is considered to be in core housing need if they are unable to find housing that is suitable in size and in good repair without spending 30% or more of their income on their housing costs.

Household maintainer: Household maintainer is a Census term that refers to the number of persons in a household and who are responsible for paying the rent, or mortgage, or taxes and other utilities with the age of the primary household maintainer being defined by the first person in the household reported on the Census form and who has been identified as having the primary responsibility.

Low income measures: A household is considered to be in low-income if their income falls below one of a number of different measures established by Statistics Canada and can include LIM (low income measure), LICO (low income cut-off) and is measured both before and after tax.

Low income measure (LIM): LIM is one of the low-income measures established by Statistics Canada and refers to households falling below 50% of the median adjusted after-tax income of private households (LIM-AT) that is further adjusted to reflect differences in household sizes.

Median household income: Median household income refers to the income level of a specified group that is the exact midpoint of the income distribution (i.e. the point where the income distribution divides into two halves).

Movable dwelling: Moveable dwelling is a Census term that refers to manufactured or mobile homes that are either rented or owned.

Movers: Movers include households who have moved in the year prior to the Census. This can include individuals who have moved but remained in the same city, town or community and who are referred to as non-migrants as well as migrants who could include individuals who have moved from a different city, town, township, village, or First Nations reserve. External migrants would be individuals who have moved from outside of Canada.

Non-census family households: Non-census family households is a Census term and refers to individuals or single person households who live alone. Non-census family households can also include unrelated individuals living together.

Number of bedrooms: Number of bedrooms is a Census term that refers to the number of rooms in a private dwelling unit that are designated for sleeping purposes while number of rooms refer to additional living spaces within a private dwelling and include other living spaces such as the kitchen, basement, living/dining area.

Private dwellings: The term private dwellings is a Census term that refers to living quarters which have a private entrance. A private dwelling occupied by usual residents refers to a private dwelling where the individual or household permanently resides.

Structure type: The term structure type is a Census term that refers to the structural characteristics of the dwelling unit and could include different housing types including single detached, semi-detached, row house or apartment unit.

Shelter cost: Shelter costs refers to the average monthly total of all shelter expenses paid by households that own or rent their dwelling and that can include mortgage payments, property taxes and condominium fees, along with the costs of electricity, heat, water and other municipal services. For renter households, shelter costs include, where applicable, the rent and the costs of electricity, and heat.

Shelter-cost-to-income ratio (STIR): The term shelter-cost-to-income ratio refers to the proportion of monthly household income which is spent on shelter costs with the shelter-cost-to-income ratio being calculated for private households who reported a total household income of greater than zero. A household is considered to be experiencing housing affordability challenges if they are spending 30% or

more of their income on their housing costs, or if they have a shelter-cost-to-income ratio of 30% or more.

Subsidized housing: Subsidized housing refers to housing where a household pays a rent that is geared to their income. Subsidized housing could refer to traditional social housing, public housing, and other forms of government-assisted housing including non-profit housing. This term can also include households that are receiving rent supplement assistance or some form of housing allowance.

Suitability: Suitability is one of the dimensions of housing need under Canada's Core Housing Need Definition and includes considerations where there are not enough rooms and living spaces to meet the basic standards requirements set out in the National Occupancy Standards (NOS). Measures of suitability refer to the degree of crowding.

Tenure: Tenure is a Census term that is used to determine whether a household rents or owns their housing.

Statistics Canada. 2017. British Columbia. Census Profile. 2016. Statistics Canada Catalogue no. 98-316-X2016001. Ottawa. Released November 29, 2017.
